COMMENTS FROM SALE PRODUCERS

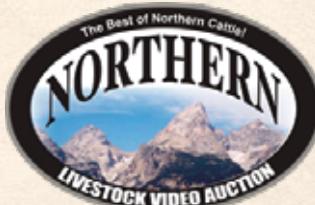

Our fellow cattlemen and friends are invited to join the Wilde Angus Sale family on sale day. While consistency and depth of the cattle remain the primary focal point of our operation, we have made a few changes to our 24th Annual production sale. First and foremost, we are excited to invite a new auctioneer to Wilde Angus and will welcome Ty Thompson as our auctioneer. Ty is a terrific auctioneer with a deep knowledge of the industry. He is well traveled and has a keen eye for quality cattle.

We also are welcoming Northern Livestock Video and will post individual videos of the bulls on their website. In conjunction, absentee bidders can bid using CattleUSA.com. Bidders can access the website to get preregistered, through either website. There is also a link to both websites on our web page at www.wildeangusranch.com.

As always, visitors are always welcome if you wish to preview the cattle before sale day. At Wilde Angus, our program is built around some of the best foundation seed stock in the Angus breed. The cow herd and the production histories are outlined in the catalog. We publicize this so our customers have the best information available to help in their selection process.

As we continue to grow and look for opportunities to add value to our clients, we strive to assist producers using Wilde genetics. If we can assist in helping place your calves in the fall, find replacement heifers, or just enjoy a day of branding at your ranch, we value those opportunities.

We look forward to seeing you this March 2nd, 2019. Come early and preview the cattle, visit with your neighbor and enjoy Matt's famous grilled steak lunch.

24th Annual Bull Sale

Saturday, March 2, 2019 1PM

At the Ranch, Shevlin, MN

OFFERING

150 Angus Yearling Bulls • 1-18 Month Angus Bull

10 Charolais Yearling Bulls • 3 Hereford Bulls

80 Commercial Bred Heifers • 25 Open Registered Angus Heifers

20 Commercial Open Heifers

Announcements: From the block will take precedence over the catalog. Buyers unable to attend may send their bids to the Auctioneer, Publication Representatives, Wayne, Don, Matt or Roelf to help with the selection of livestock with a sight unseen guarantee.

Transportation: Delta Airlines serves the Bemidji, Minnesota Airport. There is also a local airstrip near Bagley, Minnesota.

Herd Health: Minnesota is now a TB free state.

Spring vaccinations: Vista Sq, Ultrabac 8, Piligard Pinkeye Triview, Dectomax Wormer. Pre-weaning Vaccinations: Vista Once Sq., Ultrabac 8, Multimin • Weaning: Inforce 3, Visa Once Sq, Vita Charge • October 2018: Clean Sweep and Valbazen

Terms and Conditions: Cattle will sell under the Terms and Conditions as recommended by the American Angus Association. Terms are cash. Please settle for cattle promptly after the sale.

Carcass EPDS and \$Values: The American Angus Association is now calculating Carcass EPDs on a weekly basis using all available carcass harvest data, ultrasound data and the Igenity and Zoetis specific genomic profile data. It is possible new data has been submitted between the date the catalog was finalized and sale day, which will affect the individual Carcass EPDs and \$Values indexes of the animals selling. If your purchasing decision relies highly on the most current data available, please look up animals of interest on the American Angus Association web page prior to viewing the sale offering.

Additional Performance: Scrotal measurements, and 365-day adjusted weights will be available on the day of the sale.

Inspection of Cattle: Cattle can be viewed at the farm on or before the sale.

Liability: All persons attending this sale will do so at their own risk, legal or otherwise, for the safety or the behavior of the animals. The owners and sale staff assume no liability for property loss or accidents that may occur.

Boarding Arrangements: We are not responsible for injured bulls if they are left with us, you do so at your own risk. **Free delivery April 1-15**, after April 15 there will be a \$3.00 per day per bull charge.

Food and Refreshments: A complimentary lunch will be served at 11:00 am.

Retaining 1/3 semen interest in all bulls selling unless noted otherwise.

**\$100 discount per bull
if hauled home day of sale!**

Volume Discount

Starting at 3% on 3 Bulls

4% on 4 Bulls

5% on 5 Bulls

Up to 10% Total

Free delivery April 1-15

VIDEO AUCTION

Animals will be penned outside for viewing. During the sale only the video will be shown of each lot as they sell.

Animals will not come in the barn for the auction.

www.northernlivestockvideo.com • 1-866-616-5035
See page 19 for more information

Terms and Abbreviations

EPDs: Expected Progeny Difference (EPD), is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I", and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

\$Value Indexes: \$Value Indexes, are multi-trait selection indexes, expressed in dollars per head, to assist beef producers by adding simplicity to genetic selection decisions. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires in the database if the sires were randomly mated to cows and if calves were exposed to the same environment.

Individual Data

BW: Actual birth weight.

BWR: is the calves birth weight ratio among their contemporary group.

WW: Weaning weight adjusted to 205 days of age.

WWR: is the weaning rate ratio among their contemporary group.

CONT: When comparing ratios on these calves you need to compare calves that have the same number of contemporaries to have an equal and fair comparison.

WPDA: Weight per day of age at weaning time.

Dam & Grandam's Production

CI: The calving interval of the dam.

BW: The average birth weight of calves a dam has had.

BR: The number of calves a dam has had and their average birth weight ratio.

WR: The number of calves a dam has weaned and their combined average 205 weight ratio (100=average).

YR: The number of calves a dam has had 365 weights taken on and their combined average ratio (100=average).

IMF: The number of calves a dam has had IMF measurements taken on and their combined average ratio (100=average).

RE: The number of calves a dam has had ribeye area measurements taken on and their combined average ratio (100=average).

Fat: The number of calves a dam has had fat measurements taken on and their combined average ratio (100=average).

= Pathfinder

+ = Embryo Transplant

*** = Parents Qualified**

NA = -

EPDs

CED: is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

BW: A predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

WW: A predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

YW: A predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

SC: Expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

Doc: Expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility. It predicts the average difference of progeny from a sire in comparison with another sire's calves. In herds where temperament problems are not an issue, this expected difference would not be realized.

HP: A selection tool to increase the probability or chance of a sire's daughters becoming pregnant as first-calf heifers during a normal breeding season. A higher EPD is the more favorable direction and the EPD is reported in percentage units.

CEM: Expressed as a difference in percentage of unassisted births with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

Milk: A predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires.

Marb: A predictor of the difference in a sire's progeny for percent intramuscular fat in the ribeye muscle compared to other sires.

RE: A predictor of the difference in ribeye area of a sire's progeny at a given end point compared to the progeny of other sires.

Fat: expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

\$Values

\$EN: an index value expressed in dollar savings per cow per year, assesses differences in cow energy requirements as an expected dollar savings difference in daughters of sires. A larger value is more favorable when comparing two animals (more dollars saved on feed energy expenses). Components for computing the cow \$EN savings difference include lactation energy requirements and energy costs associated with differences in mature cow size..

\$W: an index value expressed in dollars per head, is the expected average difference in future progeny performance for preweaning merit. \$W includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk, and mature cow size.

\$F: an index value expressed in dollars per head, is the expected average difference in future progeny performance for postweaning merit compared to progeny of other sires. \$F incorporates weaning weight (WW) and yearling weight (YW) EPD along with feed intake data, genomic information and trait interrelationships.

\$G: an index value expressed in dollars per head, is the expected average difference in future progeny performance for carcass grid merit compared to progeny of other sires. The \$G combines quality grade and yield grade attributes, and is calculated for animals with carcass EPDs.

\$B: an index value expressed in dollars per head, is the expected average difference in future progeny performance for postweaning and carcass value compared to progeny of other sires.

Driving the science of better breeding

There's little room for error in the cattle business. Producers need the most advanced information to make smart selection decisions, and Angus Genetics Inc. (AGI) provides it through genomic-enhanced expected progeny differences (GE-EPDs).

GE-EPDs have become the industry standard for herd improvement, building on decades of science-backed genetic evaluation tools originated and maintained through the American Angus Association®, home to the largest and ever-growing single-breed beef cattle database.

EPDs that traditionally contained all pedigree, performance and progeny information now also include results from available genomic, or DNA, tests. Breeders who use genomic technology give buyers access to AGI-generated GE-EPDs that provide:

Increased predictability and decreased risk for young and unproven animals due to enhanced accuracy of EPDs

Better characterization of genetics for difficult-to-measure performance traits (such as carcass traits, maternal traits and feed efficiency)

The ability to make more rapid progress for traits that are important to you, due to:

- more accurate selection
- easier identification of genetic outliers
- the ability to propagate young animals with confidence earlier in their lives

In fact, GE-EPDs on unproven animals have the same amount of accuracy as if they had recorded 8-33 calves, depending on the trait. That's valuable insight, offered regularly through the breed's weekly national cattle evaluation.

Trait	Progeny Equivalent	Trait	Progeny Equivalent
Calving Ease Direct	28	Milk	33
Birth Weight	21	Mature Weight	11
Weaning Weight	26	Mature Height	8
Yearling Weight	21	Carcass Weight	9
Dry Matter Intake	8	Yearling Height	11
Scrotal Circumference	13	Carcass Marbling	9
Docility	10	Carcass Ribeye	12
Heifer Pregnancy	14	Carcass Fat	10

How do you know if EPDs are genomic-enhanced?

Ask your breeder, refer to the registration paper, or look for the AGI GE-EPD logo, Angus GS™ powered by partner Neogen GeneSeek or the HD50k or i50k by partner Zoetis. These images indicate animals for which low-density or high-density genomic testing has been conducted and incorporated by AGI into GE-EPDs

Ranks in the top 10% among non-parent Angus bulls for SC EPD. A son of Frey's Appearance with some great post weaning performance gaining 4.5 pounds a day. A full brother sold in the 2018 Sale to Hayhook Angus LLC of Meeteetse, WY.

Birth Weight and Calving Ease University studies in Wyoming and data from Montana and Colorado lend credence to the following conclusions:

1. The birth weight itself influences calving ease by 65%.
2. The female has 60-70% influence on birth weight of her calf.
3. The bull has 30-40% influence on birth weight of his progeny.
4. Pelvic measurement and angle as well as the shape of the calf have 35-40% influence on calving ease.
5. Length of gestation greatly affects birth weight. A fetus can gain over one pound per day in the last days of gestation.
6. Weather and temperature the last 30 days affect the length of gestation.
7. Size and maturity of the cow influence calving ease.

Most commercial producers do not take birth weights. Guessing is as inaccurate as driving with a broken speedometer - what's thought to be 55 mph may in fact be 65 or 70 mph, and what's thought to be 70-80 lbs. may actually be 80-90 lbs.

Remember, everything is relevant. Increased growth, frame, and performance will increase BW. A longer-bodied calf will weigh more. If a calf is expected to have genetics for growth, it will display this prior to birth as well as after.

As a rule of thumb, it takes a calf weighing 85 lbs. at birth to finish at 1200- 1250 lbs. a cow should easily give birth to a calf weighing 8% of her own body weight. Thus a 1200 lb. cow should give birth to a 96 lb. calf with ease.

Continued selection for light birth weights will ultimately reduce the mature sizes and performance of your cattle.

**Charolais cross-calves sired by
Aufforth Charolais bulls**

Ranks in the top 20% among non-parent Charolais bulls for his Fat EPD. A smooth-shouldered, long-neck, docile son of RA H45 Trademark 3036 who we have used for the last 5 years on both commercial and registered cows. The sire is a thick, well-muscled individual who sires offspring with moderate birth weights. When looking to add pounds at weaning time, Charolais sires are a great choice as they will add stretch, red meat, and muscle to their offspring.

Ranks in the top 7% among non-parent Charolais bulls for his WW EPD, top 9% for YW EPD, top 15% for REA EPD, and top 20% for CW EPD, Fat EPD, and \$TSI. A son of ABC DBL Niketoro B233 and out of one of our favorite cows on the place. She is thick-topped, deep-bodied, and powerful while remaining feminine. Charolais bulls sire offspring that are feed-efficient, high-yielding, meat-making, growthy animals that add pounds to their calf at weaning. When selling your calves by the pound or retaining ownership in the feeding and finishing process, Charolais-cross calves are a great choice! A 3/4 brother sells as Lot 153. We have two maternal brothers that we have used in our own herd over the past several years.

184-203 • BLUE TAGS

We are offering a set of 20 fancy, deep bodied, commercial heifers that are predominantly sired by Laflins Wampum 1305. We have calved out our first set of Wampum daughters and we are flat impressed. They are great mothers, have nice quiet temperaments, and beautiful udders. These heifers should be second to none. They have been Bangs vaccinated and are on a complete vaccination program. These heifers will be a great way to improve your commercial breeding program. They will sell in lots of 5.

204-223 • GREEN TAGS

The Ramsrud Farm has brought us a set of 20 powerful bred heifers that would be a great addition to any program or great start if someone is just getting started in the beef industry. Doug, David and Matthew have been buying bulls from Wilde Angus for the last 17 years and these 20 heifers are from the top pick of their herd. They are selected for maternal traits, good temperaments and performance. These heifers have been hand fed since weaning to ensure they are easy to deal with and should be gentle at calving as they are not afraid of humans. Three bulls were turned in June 20th and were left in there until August 30th. One of the bulls that was used to breed these heifers was Wilde's 4120 Double Dare 7106 who had an actual BW of 75 pounds. Another bull that was used to breed these heifers was Wilde's 1305 Wampum 4128 who had a birth weight of 80 pounds, a CED EPD of +10, and BW EPD of +.6. The last bull that was in with these heifers was Wilde's 0413 Priority 8110 who had a birth weight of 70 pounds, a CED EPD of +12, and a BW EPD of -2.6. These heifers are on a complete vaccination program including Vira-Shield and Ultrabac 8. These heifers have also been Bangs vaccinated. They were given their first Scour Bos 9 vaccination and also a shot of MultiMin, and prior to the sale the heifers will have received their booster shot of Scour Bos 4 and will have been pour with wormer. This is a "dandy" set of heifers that should make great mothers and calve easy.

Ramsrud Farms • Doug & David Ramsrud: (218) 657-2201 or Matthew Ramsrud (218) 657-2273

224-283 • WHITE TAGS

Stan and Mitch Mistic have brought us a set of 60 powerful commercial black heifers this year. These heifers have been on a complete vaccination program using the following vaccines: 3 rounds of Ultrabac 8, Inforce 3, Vista Once SQ, and Vira-Shield V6L5. These heifers have also been Bangs vaccinated as coming yearlings. They will have also had 2 rounds of Scourguard by sale day. They should start calving around the 25th of March and the bulls were in with the heifers for 70 days. There were 6 bulls that covered these heifers including: Wilde's 25L Courage 5283 who had a BW of 67 pounds, CED EPD of +15, and a BW EPD of -1.0. Another bull was RA 8180 Traveler 7008 who had a BW of 66 pounds, CED EPD of +9 and a BW EPD of -.1. Another bull was Points West Counterweight 706 who had a BW of 65 pounds, CED EPD of +12 and a BW EPD of -.3. The next was a son of SAC Conversation, Wilde's Conversation 4018 who has a birth weight of 73 pounds, CED EPD of +10 and BW EPD of -.3. Another bull was a Herbster Diamond 247 son, Wilde's 247 Diamond 3203 who had a birth weight of 63 pounds, CED EPD of +10, and BW EPD of -1.0. The last bull was a son of Sinclair Fortunate Son, RA Fortunate Son 6035 who had a birth weight of 61 pounds, CED EPD of +10, and a BW EPD of -2.5. These heifers should calves easy as all the bulls had light birth weights and were selected for breeding heifers. Come take a look at a nice group of heifers that should be an asset to any program, whether you are a seasoned rancher or just getting your feet wet in the livestock business. Any questions give Stan or Mitch a call.
