SELLING 85 YEARLING ANGUS BULLS

Big Dry Angus Ranch

Annual Production Sale April 15, 2021

Brent & Hillari McRae (h) 406-557-2777 (c) 977-2778
Jack & Kathy McRae (h) 406-557-6266 (c) 977-6121
www.bigdryangus.com

We welcome you to appraise our offering for our 33rd Annual Bull Sale to be held April 15 @ 1:00 p.m. at Glasgow Stockyards Inc., Glasgow, MT. We plan to have a lunch at the sale site beginning at noon.

We are very proud of the 85 yearling Angus bulls we are offering. The bulls are the culmination of nearly 60 years of breeding Angus cattle on the Big Dry, always with the cow-calf producer in mind.

All bulls selling have:

Passed a Breeding Soundness Exam and Fertility test by Dr. Lance Hughes, DVM, Central Montana Vet

Been DNA parentage verified, Genomic Trait validated for increased EPD accuracy. and tested free of all testable genetic defects by Zoetis HD50.

Been vaccinated and boosted for Foot Rot (full vaccine protocol printed in this catalog)

Are freeze branded for ease of identification after they rip their tag out.

Free delivery in Montana or $50 cash per bull if you haul your own from the sale site Out of State deliveries will be at cost.

Though our sale will be "in-person" at Glasgow Stockyards Inc., we are again working with Northern Livestock Video to carry our sale via the internet. Videos of the bulls can be found at www.northernlivestockvideo.com
Contact information for internet or phone bidding is found on our information page.
I would remind you to contact Northern at least a day ahead of time to get signed up obtain your buyers number.

This set of bulls, though weaning a bit lighter due to the summer drought and grasshoppers have performed very well this winter. We are very pleased with their post-weaning performance, overall thickness, structure, docility and maternal genetic potential.

EPD's and $ Indexes are all current as of March 26, 2021. Yearling weights are yet to be taken and will be available prior to sale week. Updates will be posted on our website.

If you have any questions about the bull offering or about our operation, please do not hesitate to call, text or email. We also invite you to view our website www.bigdryangus.com for information about our ranch.

Retained from our first crop of Rainfalls due to the overall quality and performance of his dam, Dewey has not disappointed. Freezing semen at an early age, he also maintained body condition and soundness while breeding as a yearling. We are anxious to see his daughters in production.

Extra Marbling and Rib-eye in a calving ease package with excellent growth describes Tahoe. We used Tahoe on our heifers and were pleased enough to use more . Tahoe sons look like bulls, yet his daughters are feminine. Reports from around the country indicate strong maternal quality.

Rainfall is gaining more popularity as his daughters come into production. As we calve out our 2nd crop daughters that are moderate-sized, docile, good uddered and sound on their feet and legs, Rainfall is popular with us too. In Eastern Montana, we can always use Rainfall.

Though out of a heifer, not recommended for heifers, hand assitance was required. Would add though, Dam rebred 1st service a.i. and has a calf this spring.

Herd Health, Vaccinations and Feeding

Our belief that it is better to prevent or reduce sickness through vaccinations and proper supplementation of vitamins and minerals. Our vaccination program is recommended by our Veterinarian.

Birth: All calves receive a clostridial and Multi-Min vaccination, tagged with mother's ID # and weighed.

Branding: Boostered with clostridial, as well as vaccinated with Bov-Shield 5 Gold, and Nasalgen. DNA sample taken on all calves for parentage and genetic trait testing,

Pre-Conditioning: Bovi-Shield Gold One-Shot, clostridial, Nasalgen, pour-on wormer/fly control.

Weaning and wintering of calves: all calves are weighed, fed dry free-choice chopped grass hay, given access to Sweet-Pro "Cattle-Kandi" tubs, and CHS Headstart weaning pellet for 28 days. Following 28 days, bulls are hand-fed CHS Bull Challenger in troughs with free choice chopped hay, Cattle-Kandi tubs supply minerals and vitamins as well as promoting "gut-health". Heifers are on Chopped Hay and Sweet Pro Cattle-Kandi tubs for the winter.

Post-weaning: Boostered with Bov-Shield Gold One Shot, Multi-Min and clostridial . Heifers are Brucellosis vaccinated. Worming and lice control is also done

Yearling: Freeze branded with their permanent ID #, receive foot rot vaccine and all bulls are fertility tested prior to sale. Replacement Heifers receive Preg-Guard Gold FP 10.

The cowherd is anuually vaccinated with Preg-Guard Gold FP10 at pregnacy testing, all opens are sold. The cowherd is consistently evaluated for disposition, structural soundness, including feet and legs. Fleshing ability within our environment is also evaluated. Our Cowherd is winter supplemented with Grass and Hay Barley hay. Cow's 3 and older calve in a large pasture, while 2's are calved in closer.

We are also enrolled in Maternal Plus with the Angus Association. Whole Herd reporting, including breeding and pregnancy records, calf birthweights, and weaning weights, allow us to objectively select replacement heifers and make informed breeding and culling decisions.

Though we sell calves to pay the bills, the cowherd keeps us in business.

Raising quality Angus cattle takes COMMITMENT. We take that seriously. **Big Dry Angus Ranch** is DEDICATED to not only improve our genetics, but also prepare for the future of the Angus breed. We believe that commitment starts with MaternalPlus. Contact AGI at 816-383-5100 or agi@angus.org for more information

AMERICAN ANGUS ASSOCIATION SELECTION TOOLS

Expected Progeny Difference (EPD), is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus.
Accuracy (ACC), is the reliability that can be placed on the EPD. An accuracy of close to 1.0 indicates higher reliability. Accuracy is impacted whether the animal has a genotype and the number of progeny and ancestral records included in the analysis.
Calving Ease Direct (CED), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.
Birth Weight (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.
Weaning Weight (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.
Residual Average Daily Gain (RADG), feed efficiency expressed in pounds per day, is a predictor of a sire's genetic ability for postweaning gain in future progeny compared to that of other sires, given a constant amount of feed consumed.
Yearling Weight (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.
Yearling Height (YH), is a predictor of a sire's ability to transmit yearling height, expressed in inches, compared to the that of other sires.
Scrotal Circumference (SC), expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

MATERNAL

Heifer Pregnancy (HP), is a selection tool to increase the probability or chance of a sire's daughters becoming pregnant as first-calf heifers during a normal breeding season. A higher EPD is more favorable.
Calving Ease Maternal (CEM), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.
Maternal Milk (Milk), is a predictor of a sire's genetic merit for milk and mothering ability in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.
Mature Weight (MW), expressed in pounds, is a predictor of the difference in mature weight of daughters of a sire compared to the daughters of other sires.
Mature Height (MH), expressed in inches, is a predictor of the difference in mature height of a sire's daughters compared to daughters of other sires.

MANAGEMENT

Docility (DOC), is expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility in a sire's offspring compared to another sire.
Claw Set (Claw), is expressed in units of claw-set score, a lower EPD is more favorable, indicating a sire will produce progeny with more symmetrical, even and appropriately spaced toes.
Foot Angle (Angle), is expressed in units of foot-angle score, a lower EPD is more favorable, indicating a sire will produce progeny with an angle closer to 45 degrees at the pastern and appropriate toe length and heel depth.
Pulmonary arterial pressure EPD (PAP), is expressed in millimeters of Mercury (mmHg), with a lower EPD being more favorable indicating a sire should produce progeny with a lower PAP score to decrease the risk of progeny contracting high altitude disease most commonly experienced at 5,500 ft or greater in elevation.

CARCASS

Carcass Weight (CW), expressed in pounds, is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.
Marbling (Marb), is expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.
Ribeye Area (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.
Fat Thickness (Fat), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

$VALUE INDEXES

$Value Indexes, reported in dollars per head, are multi-trait economic selection indexes where a higher values suggest more profit when comparing two individuals.
Maternal Weaned Calf Value ($M), expressed in dollars per head, predicts profitability differences in progeny from conception to weaning by decreasing mature cow size and improving docility, foot structure and fertility while maintaining weaning weights consistent with current production.
Weaned Calf Value ($W), expressed in dollars per head, provides the expected difference in future progeny preweaning performance from birth to weaning.
Cow Energy Value ($EN), is expressed in dollar savings per cow each year due to lower cow maintenance energy requirements (due to lactation and body size) with a larger number being more favorable.
Feedlot Value ($F), expressed in dollars per head, is the expected average difference in future progeny performance for postweaning feedlot merit (growth and feed efficiency) compared to progeny of other sires assuming producers retain ownership of cattle and sell on a carcass weight basis.
Grid Value ($G), expressed in dollars per carcass, is the expected average difference in future progeny performance for carcass grid merit, including quality and yield grade attributes, compared to progeny of other sires.
Beef Value ($B), expressed in dollars per carcass, represents the expected average differences in the progeny postweaning performance and carcass value compared to progeny of other sires. This index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot and sell on a carcass merit grid.
Combined Value ($C), an index, expressed in dollars per head, includes all traits that make up both $M and $B with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and sell them on a quality-based carcass merit grid.
