Annual Production Sale

Tuesday, March 15, 2022

Selling **85** Yearling Bulls • **24** Yearling Heifers • **8** Young, Bred Cows

Welcome

On behalf of my family and crew, I would like to thank you for showing interest in our breeding program. With roots in agriculture that date back over 100 years, our family has worked hard to build a reputable program synonymous with quality, integrity, and stewardship.

Hereford demand continues to rise throughout the industry and we're really excited about the increased interest we've seen from cattlemen seeking the many benefits that accompany crossbreeding. For years, we've put pressure on maintaining moderate birth weights and have selected for calving ease. But performance and maternal are the backbone of our program. We believe there's value in both hard data gathered in the field and on the scale, but also find value in the results received from utilizing tests and tools set forth by the Hereford Association and the Industry at large.

We believe one of the biggest benefits our program has to offer commercial cattlemen and seedstock producers alike is the predictability that comes from maintaining a closed line of genetics for over 70 years. While our high inbred coefficient has enabled us to increase uniformity and predictability in our herd, it has likely cost us a bit of the boost we'd gain by implementing genetics outside the Line 1 pool. The bump in weights, vigor and fertility is instead realized tenfold when our customers implement our genetics within their program. If you have any questions about the sale offering, or our program in general, I'm happy to visit with you any time.

Like many of you, we experienced one of the longest, hottest, driest summers on record. It took some extra time in early spring to formulate a plan for how best to manage our water and feed resources. We sold some cows, harvested much less feed and instead used the pasture to sustain our herd. Calves were weaned early this year and weights, despite drought conditions, were just pounds off previous years. It was a very mild fall and winter, but gains in the feedlot were right on track. Our target gain of 3.5 lbs./day ensures the bulls have enough flesh to maintain condition as a yearling without sacrificing structural integrity.

We look forward to seeing you on sale day.

RANCH LOCATION

Cooper Hereford Ranch
2303 Cooper Rd., Willow Creek, MT 59760

SALE TERMS

The cattle will sell under the standard terms and conditions as recommended by the American Hereford Association. The animal becomes the property of the purchaser as soon as sold. Any death or injury thereafter falls upon the buyer.

PAYMENT TERMS

All sales are cash unless arrangements are made with seller prior to the sale. Full payment is required prior to delivery or transfer of registration papers.

BREEDING GUARANTEE

We guarantee all livestock sold as sound breeders. If an animal fails to breed it must be reported to CHR or returned in good condition and in compliance with the health regulations of MT. If an adjustment is required, it will be made with a replacement animal of equal value (or) credit of another animal of equal value in our NEXT sale. No adjustments will be made after (9) months.

DELIVERY

We offer free delivery for the first 1,000 miles on purchases totaling \$5,000 or more. Deliveries will be to central points.

Bob Woolsey, *Woolsey Trucking* (406) 670-1877
Tanner Jensen, *Jensen Cattle Service* (406) 239-0302

HEALTH

The health of our herd is managed by Dr. Will Oliver, DVM. All cattle will meet the import requirements of their state of destination. All bulls have passed a Breeding Soundness Exam.

GENOMIC ENHANCED EPDs

Every lot selling has been parent verified and has GE-EPDs. EPDs listed in catalog are the most current at time of printing.

VIDEO CATALOG & PICTURES

A video of each lot and pictures of select lots can be viewed online at www.cooperherefords.com

ABSENTEE BIDDING

Online bidding is available via LiveAuctions.tv and Northern Video. Those with unreliable internet should consider calling Mark or Dave ahead of the sale or consider placing a bid over the phone via Northern's video conference call line.

LIABILITY

All persons who attend the sale do so at their own risk. Neither Cooper Hereford Ranch, nor any person connected to this sale assumes any liability, legal or otherwise, for accidents, illness, or loss of property that may occur.

(7.7)	2.4	(67)	(105)	1.3	(34)	(68)	0.12	0.13	(141)

Like his sire 215Z, 710E fits the demands of the beef industry combining proven calving ease, performance, maternal and carcass merit. He's a trait leader in 12 categories and ranks in the top 30% of the breed or better in 14 traits, including top 1% CEM, Udder, Teat, CW and top 15% for CED, WW and YW. Sons are, for the most part, short marked, have great length of body and depth of rib, and possess good carcass merit. Daughters are performing well in our herd and have udders that match the pedigree and EPDs. Excellent option for crossing on black hides.

Owned with: Coates Ranch Co., Indian Mound Ranch

Second highest selling bull in our 2018 production sale at \$80k to L Bar W Cattle Co. This 5047 son is marked up near perfect, has tremendous depth of rib and good muscle. Above breed average CED combined with top 25% of the breed for WW and YW. 776E is a trait leader in 6 categories including fertility, teat, udder and marbling. Sons are really balanced and promise growth backed by maternal and carcass merit.

Owned with: L Bar W Cattle Co.

0.2	4.8	(73)	(127)	(1.6)	30	(66)	(0.80)	0.04	(137)

Top selling bull in our 2018 sale at \$170k to Hoffman Ranch. We've used this bull extensively and are utilizing 3 sons (942G, 992G, 993G) as herd sires. Progeny are short marked with excellent pigment and display lots of bred-in performance. To say his progeny have been well received is an understatement - 23 bulls sold through the ring over the past 2 years have averaged \$22k; 7 heifer calves have averaged \$7250. 7131E is a trait leader in 10 categories and ranks in the top 5% of the breed for WW, YW, CW and REA. Daughters are stout, very maternal, and show nice udder development - trait leader for teat and udder.

(7.0)	2.8	65	95	(1.5)	29	(62)	(0.66)	0.14	139

Our pick in Holden's 2018 sale. 7156E combines phenotype and cow power with a breed leading EPD panel. Sons exhibit the length, depth of rib and muscling that our industry demands. We retained an interest in his son 9108G and are very pleased with his calves so far. 7156E is a trait leader in 6 categories including CED, Fertility, M&G, REA and \$CHB. Daughters are in production and really have that maternal look with lots of milk and good udder development.

We retained 1/2 possession of this bull that sold in our 2019 sale and have used him as a clean-up bull. Sire 6128D was an 055X son that sired big time performance and this bull is very similar. 8127F ranks in the top 20% of the breed for WW, YW, Milk, M&G, Teat and Udder; top 15% for CW, Marbling and \$CHB. Calves have excellent vigor at birth.

Top selling bull in our 2020 sale at \$60k. This bull really checks all the boxes in terms of phenotype and numbers. His individual scan data was excellent, 112 REA ratio and 139 IMF ratio, and his pedigree promises maternal excellence, performance and carcass merit. Top 5% of the breed for WW, YW combined with top 35% for CED, BW. As a coming 3 year old he's already a trait leader in 11 categories. EPD panel ranks him in the top 10% for Fertility, CW, REA, Marbling and all three profit indexes. Scan data so far - 57 progeny in 3 different herds: 100 REA ratio, 114 IMF ratio.

Dam 9184W has been an easy keeper, reliable female. Still in production on our ranch at 13 years of age. 9108G is a trait leader in WW, M&G, CW and \$CHB. EPD panel ranks him in the top 30% of breed for 12 traits, including top 1% CW, top 5% WW, top 15% YW and top 30% for CED.

Owned with: Johansen Herefords, L Bar W Cattle Co.

COOPER HEREFORD RANCH

EXTRA shot of Heterosis

Our inbred coefficient of 24-36% ensures MAXIMUM heterosis when crossing on Herefords or other breeds.

Uniformity & Predictability

Maintaining a closed line of breeding for over 70 years means HIGHLY predictable offspring.

Performance & Carcass

We've performance tested for over 60 years, collected carcass data on ALL yearlings for 25 years, and began submitting DNA for GE-EPD evaluation 9 years ago.

Maternal

Our cow herd ranks in the top 20% of the breed for Milk and the top 20% of the breed for M&G.

AHA Platinum TPR Breeder

The Platinum TPR Breeder is the highest level of achievement when it comes to complete calf crop reporting. Breeders must meet all the requirements of Gold TPR Breeder status plus genotype 85% of their calves with a weaning weight submitted.

- Complete reporting of calving ease and reproductive status for each dam on inventory.
- Complete reporting of birth, weaning, and yearling weights for each live calf recorded in the calf crop.
- Complete reporting of scrotal measurements for each bull calf with a recorded yearling weight.
- 85% of calves with a weaning weight submitted must be genotyped.

We go above TPR Platinum standards

In addition to the above information, we also report the following:

- Teat and Udder scores on all cows are recorded at time of calving and submitted to AHA with our calf crop.
- Ultrasound data is gathered and submitted to AHA on ALL animals with a recorded yearling weight (heifers included).
- All sale animals and our ENTIRE cow herd have GE-EPD profiles.

Bulls: MPB Guard, MultiMin, Nuplura, Ivermectin, CleanUp

PRE-BREEDING

Express FP5, Reprostar VL5 HB (heifers), Clean-up

WHOLE HERD TESTING

All sale animals have been tested free of known genetic defects. All bulls and heifers have been ear notched and are negative to BVD. Montana is once again Class Free with regard to Brucellosis - all sale animals have been bled and tested negative.

In response to feedback from the veterinary community and buyers of MT cattle, the Dept. of Livestock has developed a state program to reduce the spread of Johne's disease through animal sales and movement. Our ranch is actively participating.

BREEDING SOUNDNESS

FERTILITY

JANUARY 25, 2022

All yearling bulls featured in this catalog have passed a Breeding Soundness Exam (BSE) completed by Dr. Will Oliver, DVM. Scrotal and pelvic measurements were obtained by Dr. Oliver as well.

SC (Scrotal Circumference)

A measurement of fertility. Testicle size indicated by scrotal circumference measured in (cm) is a highly inheritable trait very much correlated to reproductive efficiency. A valuable indicator of bull fertility and puberty, and highly related to early puberty in heifers and cow fertility, increased bull scrotal circumference should improve fertility and inherent cow herd productivity.

Acceptable range (cm) for bulls 12-14 mo. is 30-35 cm

85% of the bulls in our sale this year rank above breed avg. for SC EPD

Yearling Bulls 2022

- Top 15% CW, Marbling and all 3 profit indexes.
- Top 35% CED, WW, YW

121J

John Goggins

Eye Pigment: L - 100 R - 80 Scrotal: 35 REA/100lbs: 1.03

A really nice patterned bull out of the immortal 9126J. We were excited to bring this pedigree back to the forefront and see how it stacks up against the industry today. I've liked this prospect all summer and think he has a lot of potential. He's big topped, has tremendous length of body and overall extension. Solid EPD panel - top 30% of the breed in 12 traits, combining top calving ease and good growth with maternal and carcass. 121J weighed 83 lbs. at birth and really excelled through the summer weighing 850 lbs. at weaning. Gained 4.0 lbs./day and weighed 1360 lbs. in January. Dam 671D sold to WD Herefords this past fall.

Maternal, performance, and carcass merit. This 942G son is stout, has tremendous muscle expression and is very clean fronted. Displays a lot of natural eye appeal - has a red neck and 100% pigment. When you find him out in the pen, you'll like him. He's sure footed and strides out smoothly. Outstanding performance. Combines an 86 lb. birth weight with an 800+ lb. weaning weight. Gained 4.1 lbs./day and weighed 1330 lbs. in January. Top bull in the sale for CW and #6 bull for REA. EPD panel ranks in the top 20% for 13 traits.

Unable to Attend? Bid live

LiveAuctions.TV 2.0

Technical Support:
(682) 816-4900

TechSupport@LiveAuctions.tv

Go to www.LiveAuctions.tv. Please note that you do NOT need an account to watch the auction, but you do need to register an account and request a buyer number if you wish to bid.

- If you have not created a new account since September 1st, 2020 you will need to click "Register" in the top right corner of the homepage and create a new account.
- Once you have completed the form on this registration page and hit the "Register" button you will receive an e-mail with a place to click on to verify you have entered a valid e-mail address.
- Once you have completed this registration process, find the auction you are interested in on the homepage and click on it (sales are listed in chronological order).
- You should then see a box that says Login.
- Now that you have an account with LiveAuctions just type in your E-mail Address and Password.
- You will now see a hyperlink at the top that says "Request a Buyer Number".
- The first time you request your first buyer number on LiveAuctions it will send you a text message with a verification code in it. Type the code from the text message into the area requiring it and you will then see your name along with a buyer number listed at the top of the webpage where the live video is and you will be able to bid.
- You will only have to complete this two-step verification process one time. After that you will be able to immediately request a buyer number on any auction without verification through an e-mail or text message again.
- LiveAuctions no longer requires an app. If you wish to view/register/bid on a smartphone just type LiveAuctions.tv in whatever web browser you use. The registration process is the same as it is on a desktop computer, but the website is built mobile friendly. Click on the three lines in the top right corner to access the menus.
- If you need help registering to bid or to view the auction please call Technical Support at (682) 816-4900 or e-mail us at TechSupport@LiveAuctions.tv.

This 9108G son caught our eyes early and kept our attention through the seasons. Definitely has the look and power to move any program along in the right direction. Started off at 82 lbs. and weighted 820 lbs. at weaning. Picked up steam through the fall gaining 4.3 lbs./day and weighed 1365 lbs. in January. He's short marked, has a big hip, loads of natural muscling and 100% pigment. Can't beat the bred-in calving ease combined with solid growth this pedigree offers. Dam is a top-end 215Z daughter with a great udder. She is a full sibling to herd sire 710E and sold in our 2020 cow sale to W-D Herefords. She ranks in the top 25% of the breed in 10 traits.

One of the top 9108G sons to sell this year! This pedigree and EPD panel are packed full of performance and maternal power. Marked up good, this bull is red necked, red to the ground and has 100% pigment. He's long, deep sided with loads of rib expression and a very thick quarter. Posted the top weaning weight at 885 lbs. Dam is a 1st calf heifer out of 710E. Weaning weight adjusted up to what is likely the highest 205 day wt. we've seen from a 1st calf heifer. Top bull in the sale for WW and M&G; #4 bull for YW and CW. Dam 9190G is a beautiful 710E daughter with a great udder. She ranks in the top 20% of the breed in 11 traits.

- Top 1% CW, above breed average Marbling, Top 25% REA
- Top 3% WW, YW and above breed average CED

Eye Pigment: L - 100 R - 100 Scrotal: 36 REA/100lbs: 1.09

Another really stout 9108G son marked up just right - 100% pigment, red neck and red to the ground. He's long, has good depth, good spring of rib, and good overall capacity. Scanned a big REA, 112 ratio. Weighed 775 lbs. at weaning and gained 4.0 lbs./day. Dam has a WR 105/3 and YR 102/3. Use on mature cows and you'll benefit from the performance and fertility in this pedigree.

- Top 5% WW, Fertility, M&G, CW
- Top 20% YW, Milk

I sure like the way this bull is put together - very balanced profile with a good look. He's smooth through the top and down through to his lower quarter. He'll pack some growth into his progeny. A lot of maternal strength throughout this pedigree. Dam is a really nice 4067B daughter out of the 435B donor purchased by Indian Camp Livestock. She has the 2nd highest Milk EPD +41 in our herd.

Eye Pigment: L - 100 R - 100 Scrotal: 34 REA/100lbs: 1.15

A really exceptional 8392F son chock full of muscle and power. He's short marked with a red neck and 100% pigment. Carries loads of rib shape and has about as thick of a quarter as any bull in the sale. This calf is a young ET but really took off once on test gaining 4.0 lbs./day. Balanced EPD panel coupled with an outstanding maternal pedigree that combines Holden's 2022 cow and 055X. Dam, at 12 years of age, still ranks in the top 25% of the breed or better in 12 traits excelling in performance, maternal and carcass!! 1195J is the top bull in the sale for Milk and 7th for M&G.

View the online CATALOG and VIDEO CLIP of each BULL selling at www.northernlivestockvideo.com

Register online at:

- First time users must register as a viewer.
- In the Live Auctions Tab, select "Cooper Hereford Ranch" and register as a buyer (only if you wish to buy) and click the blue submit button.
- Complete required contact and banking information then click the proceed button.
- After you have been approved as a buyer, you will receive a conformation email. On sale day, click the green view button for the sale. You will have a "bid now" button on your screen to place your bids. Click the "bid now" button to place your bids.
- The bid received by the auctioneer will be the amount showing in the Price box in the bid.

Phone Bank

Those wishing to use Northern Livestock phone bank to bid must pre-register and have a bid number.

To register with NLVA call 866-616- 5035 Before Sale Day.

Bidders who are successful in making purchases will be contacted following the sale to make payment and delivery arrangements.

Northern Livestock's Sale Day Bid Line: 1(406) 245-0889

Understanding Hereford EPDs

The American Hereford Association (AHA) currently produces expected progeny differences (EPDs) for 17 traits and calculates three profit indexes. AHA's genetic evaluation makes use of a Marker Effects Model that allows the calculation of EPDs by incorporating the pedigree, phenotypic and genomic profile of an animal. Animals that have a genomic profile will be denoted with GE-EPD logo.

The current suite of Hereford EPDs and profit indexes includes:

Calving Ease — Direct (CE)

CE EPD is based on calving ease scores and birth weights and is measured on a percentage. CE EPD indicates the influence of the sire on calving ease in females calving at 2 years of age. For example, if sire A has a CE EPD of 6 and sire B has a CE EPD of -2, then you would expect on average, if comparably mated, sire A's calves would have an 8 percent more likely chance of unassisted calving when compared to sire B's calves.

Birth Weight (BW)

BW EPD is an indicator trait for calving ease and is measured in pounds. For example, if sire A has a BW EPD of 3.6 and sire B has a BW EPD of 0.6, then you would expect on average, if comparably mated, sire A's calves would come 3 lb. heavier at birth when compared to sire B's calves. Larger BW EPDs usually, but not always, indicate more calving difficulty. The figure in parentheses found after each EPD is an accuracy value or reliability of the EPD.

Weaning Weight (WW)

WW EPD is an estimate of pre-weaning growth that is measured in pounds. For example, if sire A has a WW EPD of 60 and sire B has a WW EPD of 40, then you would expect on average if comparably mated, sire A's calves would weigh 20 lb. heavier at weaning when compared to sire B's calves.

Yearling Weight (YW)

YW EPD is an estimate of post-weaning growth that is measured in pounds. For example, if sire A has a YW EPD of 100 and sire B has a YW EPD of 70, then you would expect on average if comparably mated, sire A's calves would weigh 30 lb. heavier at a year of age when compared to sire B's calves.

Dry Matter Intake (DMI)

The DMI EPD predicts the daily consumption of pounds of feed. For example, if sire A has a DMI EPD of 1.1 and sire B has a DMI EPD of 0.1, you would expect sire B's progeny, if comparably mated, to consume on average 1 pound of feed less per day.

Scrotal Circumference (SC)

Measured in centimeters and adjusted to 365 days of age, SC EPD is the best estimate of fertility. It is related to the bull's own semen quantity and quality, and is also associated with age at puberty of sons and daughters. Larger SC EPDs suggest younger age at puberty. Yearling sons of a sire with a 0.7 SC EPD should have yearling scrotal circumference measurements that average 0.7 centimeters (cm) larger than progeny by a bull with an EPD of 0.0 cm.

Sustained Cow Fertility

The AHA's new SCF EPD is a prediction of a cow's ability to continue to calve from three years of age through 12 years of age, given she calved as a two-year-old. The EPD is expressed as a deviation in the proportion of the 10 possible calvings to 12 years old expressed as a probability. For example, the daughters of a bull with a 30 EPD would have the genetic potential to have one more calf by age 12 than the daughters from a bull with a 20 EPD. In other words, the daughters from the 30 EPD bull would have a 10% greater probability of having one more calf than the bull with a 20 EPD. This is equivalent to saying that the daughters are 10% more likely to remain in the herd to age 12.

Maternal Milk (MM)

The MM EPD of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. Daughters of the sire with a +14 MM EPD should produce progeny with 205-day weights averaging 24 lb. more (as a result of greater milk production) than daughters of a bull with a MM EPD of -10 lb. (14 minus -10.0 = 24 lb.). This difference in weaning weight is due to total milk production during the entire lactation.

Maternal Milk & Growth (M&G)

The M&G EPD reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of the daughter's progeny weaning weight. A bull with a 29 lb. M&G EPD should sire daughters with progeny weaning weights averaging 19 lb. heavier than progeny of a bull's daughters with a M&G EPD of 10 lb. (29 minus 10 = 19 lb.). It is equal to one-half the sire's weaning weight EPD, plus all of his MM EPD. No accuracy is associated with this since it is simply a mathematical combination of two other EPDs. It is sometimes referred to as "total maternal" or "combined maternal."

Maternal Calving Ease (MCE)

MCE EPD predicts how easily a sire's daughters will calve at two years of age and is measured on a percentage. For example, if sire A has a MCE EPD of 7 and sire B has a CE EPD of -3, then you would expect on average if comparably mated, sire A's daughters would calve with a 10% more likely chance of being unassisted when compared to sire B's daughters.

Mature Cow Weight (MCW)

The MCW EPD was designed to help breeders select sires that will either increase or decrease mature size of cows in the herd. The trait was developed after years of cow weight data collection and the EPD relates directly to the maintenance requirements of a cow herd. For example, if sire A has a MCW EPD of 100 and sire B has an EPD of 85, then you would expect the females of sire A, if comparably mated, to be 15 lb. heavier at mature size.

Udder suspension (UDDR)

UDDR EPDs are reported on a 9 (very tight) to 1 (very pendulous) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment.

For example, if sire A has a UDDR EPD of 0.4, and sire B has a UDDR EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score better udder suspension in daughters of sire A, compared to sire B.

Teat size (TEAT)

TEAT EPDs are reported on a 9 (very small) to 1 (very large, balloon shaped) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment.

For example, if sire A has a teat size EPD of 0.4, and sire B has a teat size EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score smaller teat size in daughters of sire A, compared to sire B.

Carcass Weight (CW)

CW EPD is a beneficial trait when considering the impact that pounds have relative to end product value. At the same age constant endpoint, sires with higher values for carcass weight will add more pounds of hot carcass weight compared to sires with lower values for carcass weight. For example, if sire A has a CW EPD of 84 and sire B has a CW EPD 64, then you would expect the progeny of sire A, if harvested at the same age constant endpoint, to have a 20-lb. advantage in terms of hot carcass weight.

Rib Fat (FAT)

The FAT EPD reflects differences in adjusted 365-day, 12th-rib fat thickness based on carcass measurements of harvested cattle. Sires with low, or negative FAT EPDs, are expected to produce leaner progeny than sires with higher EPDs. Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Ribeye Area (REA)

REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better-muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Marbling (MARB)

MARB EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat, [IMF]) based on carcass measurements of harvested cattle. Breeding cattle with higher MARB EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Baldy Maternal Index (BMIS)

The BMIS is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed towards Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability from finishing of non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

Brahman Influence Index (BIIS)

The BIIS is a maternally focused index that is based on a production system that uses Brahman x Hereford cross cows. Progeny of these cows are directed towards a commodity beef market since Certified Hereford Beef® does not accept Brahman influenced cattle. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability in finishing non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep harvested progeny successful for a variety of commodity based programs. This index targets producers that use Hereford bulls on Brahman influenced cows.

Certified Hereford Beef Index (CHBS)

CHBS is a terminal sire index that is built on a production system where Hereford bulls are mated to mature commercial Angus cows and all progeny will be targeted for Certified Hereford Beef® after the finishing phase. This index has significant weight on Carcass Weight to ensure profit on the rail. As well there is a positive weighting for Average Daily Gain along with a negative weighting on Dry Matter Intake to ensure efficient pounds of growth in the finishing phase. Keep in mind, this production system takes advantage of complimentary breeding with the commercial Angus cow. Although Marbling is weighted positively in this index, a positive weighting for Rib-eye Area and a negative weighting for Back Fat are a greater priority in this index to allow for optimum end-product merit. This is the only index that has no emphasis on fertility. Remember that no replacement heifers are being retained.

Maternal matters.....

Our cow herd ranks in the top 15% of the breed for Milk and the top 20% of the breed for M&G.

Eye Pigment: L - 80 R - 80 REA/100lbs: 0.97 IMF: 4.03

Bred: Pasture to CL 1 Domino 079H Due: Fall 2022 Sex: N/A

A proven donor cow out of 215Z. 701E adds generations of calving ease, loaded with maternal excellence and strong carcass merit. A moderate sized cow with a ton of rib and volume. Strong top with a big hip and a lot of pure, natural muscle throughout her lower quarter. Loads of eye appeal, good pigment and a lot of power. We hate to see a female of this caliber leave the ranch - but what an opportunity for you. If you're looking to enhance marbling, this pedigree should do the trick! 701E has a 119 IMF ratio herself and 109/9 REA ratio and 110/9 IMF ratio. She has the 7th highest \$CHB in our cow herd.

- Top 5% Longevity, CW, Marbling and all three profit indexes
- Top 20% YW, Milk, M&G, CEM, Teat
- Top 35% Fertility, Udder
- Sons sell as lots: 116J, 120J, 132J, 136J, 138J
- Sex & calving date will be available on sale day

Eye Pigment: L - 100 R - 85 REA/100lbs: 1.16 IMF: 2.17

Bred: AI to CL 1 Domino 9108H Due: 04/12/2022 Sex: Heifer

We flushed this young cow last spring. A daughter out of the 5107C bull, which brings in 105Y and a shot of the Miles City 02439 cow. You'll really like her look and her solid performance record; avg. WR 105/3 and YR 105/3. Son sold to Buford Ranches in our sale last year for \$56,000.

- Top 10% Milk.

Dam of 701E! A female with a lot of rib capacity, volume and loads of eye appeal, not to mention bred-in carcass; 8 progeny have 105 REA ratio and 110 IMF ratio. Owned by L Bar W Cattle Co.

Thank You for supporting our program

Our Crew

As you all know, one of the greatest challenges our Industry faces today is the shortage of skilled workers who are willing to devote their time and energy to an operation. We are so blessed to have a small, but mighty crew. And are so appreciative of their commitment to our operation and willingness to work extra hours when the seasons demand.

LEROY BALLARD
SCOTT SAYER
DAVE HANSON
WHOBEE HUGHES

Thank You

In addition to those who contribute their professional services to our operation throughout the year, there is also a large group of talented individuals working ringside and on the auction block who help ensure our sale runs smoothly. THANK YOU - your expertise, professionalism & dedication do not go unnoticed.
