

COOPER HEREFORD RANCH

Tuesday **3.10.26**

60TH *Annual Production Sale*
at the ranch, 1/2 mile south of Willow Creek, MT

Welcome

TO OUR 60TH ANNUAL PRODUCTION SALE

On behalf of my family and crew, I would like to thank you for showing interest in our program and humbly invite you to join us for our 60th annual sale this March at our ranch in Willow Creek.

As I write this letter and reflect on the past year, I give thanks to God for granting me the opportunity to spend a lifetime working alongside my family in a business I'm passionate about within an industry I believe in. What a blessing. As cattlemen, we are finally enjoying the fruits of our labor. The markets continue to exceed expectations, Hereford influenced cattle are in great demand, and consumers are in love with beef. Ranchers getting paid by the pound continue to transition from an all black herd to one with Hereford influence, not only for the realized gains driven by increased heterosis, but also for the unrealized traits of docility and longevity that have long been associated with our breed.

This past fall we had the great pleasure of hosting Hereford enthusiasts from around the World as they made their way across the Big Sky state as part of a pre-tour associated with the World Hereford Conference organized by the American Hereford Association and hosted at our headquarters in Kansas City, MO. What a tremendous opportunity it was for my family to connect with likeminded breeders and producers. We learned a lot, and want to extend a big thank you and congratulations to Jack Ward and his team for pulling off such a well attended and finely orchestrated event.

As we look to 2026, we do so with optimism. Hosting our 60th annual sale reminds us of the hard work and great foresight exhibited by those who came before us. We hope that whether you're a new buyer or one who has been with us through thick and thin, you continue to see the rewards and benefits that come from integrating our genetics into your herd.

Sincerely,

Mark & Cristy Cooper Family

INSURANCE PROVIDERS

Sale representatives listed above with an * by their name may be contacted in regards to purchasing insurance.

SALE LOCATION

Cooper Hereford Ranch
2303 Cooper Rd., Willow Creek, MT 59760

SALE TERMS

The cattle will sell under the standard terms and conditions as recommended by the American Hereford Association. The animal becomes the property of the purchaser as soon as sold. Any death or injury thereafter falls upon the buyer.

PAYMENT TERMS

All sales are cash unless arrangements are made with seller prior to the sale. Full payment is required prior to delivery or transfer of registration papers.

DELIVERY

We offer free delivery for the first 1,000 miles on purchases totaling \$7,500 or more. Deliveries will be to central points.
Woolsey Trucking, Bob Woolsey, (406) 670-1877

LIABILITY

All persons who attend the sale do so at their own risk. Neither Cooper Hereford Ranch, nor any person connected to this sale assumes any liability, legal or otherwise, for accidents, illness, or loss of property that may occur.

Nice mix of natural and ET calves selling. Dam was one of the top performing cows on our ranch before selling to EF1 Cattle Co. This pedigree guarantees pigment and big-time performance. Calves weaned off heavy with an 800 lb. average weight and performed well on test. They're big, lengthy bulls that will add pounds and increase end product merit. Top 5% of the breed for WW, YW, SC, MG, CW; Top 20% of better MM, MARB, CHB\$.

Another sire that has a good mix of natural and ET calves selling. A handful are out of first calf heifers and were among the top performers for 205-day weight this year. Combines maternal function with moderate birth weights, top of the breed performance and good carcass. Calves are moderate framed and dense made with square hips and plenty of pigment. They'll catch your eye out in the pen. He's already a trait leader in 12 categories. Top 3% WW, YW, Teat!

Our pick and the sale topper in Holden's 2024 sale. We chased this bull primarily for the udder quality on the bottom side of his pedigree and because he was the perfect outcross for our program. Another of the largest sire groups selling in 2026, these calves are consistent in how they performed and should ensure excellent maternal and carcass traits pass to the next generation. Top 5% SC, MM, MG, MARB, CHB\$. Top 15% WW, YW, CW and BMI\$.

We purchased a semen package on this bull that was at the top of a lot of breeders' lists the year he sold. We used him extensively on heifers making his calves the largest sire group in our 2026 offering. They're moderate, thick-made and have good capacity. This bull offers elite calving ease alongside impressive growth and carcass. He's already a trait-leader for CED, SCF, MM, MG, udder, teat, CW, REA, MARB, BMI\$ and CHB\$.

Lead-off bull in our 2023 Sale! He topped it at \$125,000 and then produced a son, 456M, who topped our sale the very next year. This pedigree stacks power on top of power and adds a lot of length and just enough frame to his offspring who are big bodied with eye-appeal. First daughters are in production at our ranch and he stamps 'em right. Udder quality is superior so far, putting him in good company with his sire. This bull continues to make an impact on our herd and the industry. Trait leader in 8 categories!

CL 1 Proven Sires

Since purchasing our foundation Line 1 stock from the U.S. Livestock & Range Experiment Station we have prioritized performance and structure when selecting our herd sires. Our proven herd sires are bulls that have worked in a wide range of programs across varied terrain. We want your investment in our genetics to be realized through cows that stay in your herd and calves that turn a profit. These sires will do just that. They come from a long line of predecessors with bred-in structural soundness and maternal strength that have achieved consistency where it matters most.

CL 1 Young Sires

We have always believed that a herd bull should produce sons better than himself within a few years, which is why you'll see a large percentage of these yearling bulls sired by fresh genetics. Never one to chase extremes, we maintain a balanced approach to trait selection, seeking to retain young sires that can do it all. Furthermore, the predictability and consistency delivered by line breeding gives us the confidence these young bulls will pass it all on to the next generation.

"Top of the Tops" in *Line 1*

COOPER HEREFORD RANCH

the *CL* advantage

* Elite Breeder Status

Cooper Hereford Ranch is recognized as a Platinum TPR Breeder by the American Hereford Association. We are one of only twenty three spring breeders that qualify for this status! Read about the requirements below.

EXTRA shot of Heterosis

Our inbred coefficient of 24-36% ensures MAXIMUM heterosis when crossing on Herefords or other breeds.

Closed Line Precision

Line bred for over 80 years! The pedigrees behind our bulls are stacked with generations of cows that are highly related and selected for traits that ensure profitability.

Unrivaled Data & Testing

We value hard data. That's why we've collected it for over eight decades and continue to utilize real world numbers. We also stay ahead of the curve by implementing new technologies and were among the first Hereford breeders to run GE-EPDs on our entire herd & each subsequent calf crop.

Ready to Work

Whether you're retaining heifers or selling calves, our cattle are bred to thrive and deliver exceptional results!

AHA Platinum TPR Breeder

The Platinum TPR Breeder is the highest level of achievement when it comes to complete calf crop reporting. Breeders must meet all the requirements of Gold TPR Breeder status (listed below) plus genotype 85% of their calves with a weaning weight submitted.

- Complete reporting of calving ease and reproductive status for each dam on inventory.
- Complete reporting of birth, weaning, and yearling weights for each live calf recorded in the calf crop.
- Complete reporting of scrotal measurements for each bull calf with a recorded yearling weight.
- Ultrasound data reported on 25% or more of the calf crop.

We go above TPR Platinum standards

In addition to the Gold and Platinum requirements, we also:

- Record Teat and Udder scores on all cows at time of calving and submit to AHA with our calf crop.
- Submit ultrasound data to AHA on ALL animals with a recorded yearling weight (heifers included).
- Run GE-EPDs on ALL sale animals and our ENTIRE cow herd.

GE-EPD Accuracy Improvement

Pairs are turned out to pasture in mid May and graze primarily irrigated grass/legume pastures until they are weaned in late August. Groups are supplemented with loose mineral and salt.

No creep is ever used.

Calves are weaned just after Labor Day, placed in a drylot and fed twice daily a mixture of chopped hay, corn silage, whole corn, and a mineral based protein supplement. Most of the bulls exceeded our target gain of 3.5 lbs./day, which we feel is adequate to ensure they have enough flesh to maintain condition as a yearling without sacrificing structural integrity.

*** ALL bulls are parent verified, have ultrasound data and GE-EPDs.**

WHOLE HERD TESTING

All sale animals have been tested and are free of known genetic defects.

All bulls and heifers have been ear notched and are negative to PI and BVD. Montana is once again Class Free with regard to brucellosis - all sale animals have been bled and tested negative.

In response to feedback from the veterinary community and buyers of MT cattle, the Dept. of Livestock has developed a state program to reduce the spread of Johnne's disease through animal sales and movement. Our ranch is actively participating.

BREEDING SOUNDNESS

FERTILITY

JANUARY 21, 2026

All yearling bulls featured in this catalog have passed a Breeding Soundness Exam (BSE) completed by Dr. Will Oliver, DVM.

Scrotal and pelvic measurements were obtained by Dr. Oliver as well.

SC (Scrotal Circumference)

A measurement of fertility. Testicle size indicated by scrotal circumference measured in (cm) is a highly inheritable trait very much correlated to reproductive efficiency. A valuable indicator of bull fertility and puberty, and highly related to early puberty in heifers and cow fertility, increased bull scrotal circumference should improve fertility and inherent cow herd productivity.

Acceptable range (cm) for bulls 12-14 mo. is 30-35 cm

COOPER HEREFORD RANCH

CL 1 DOMINETTE 9190G IET

Dam of 501N, 503N, 513N, 568N, 5123N

As a first calf heifer 9190G raised an 855 lb. bull calf that sold to Three Hills Ranch. She's raised heifer calves every year since, so you'll find her pedigree behind some nice young females currently in our herd. Powerful ET sons have sold to Fawcett's Elm Creek Ranch and Van Newkirk Herefords. This broody cow passes some size on to her progeny, but adds performance in equal amount. Nice set of ET sons sell. All weighed over 700 lbs. at weaning with an average weight of 755 lbs. She and full sister 9192G have great udders.

Good pigment and red to the ground with added length of body and depth of rib. This 348L son combines ideal phenotype with performance and maternal excellence. Weighed 790 lbs. at weaning, gained 4.2 lbs/day, and scanned a good REA. Ranks in the top 10% of breed for MM, MG and CW; top 30% or better for WW, YW, SC and Udder. Dam is a 710E daughter with a very nice udder.

- Flush brothers sell as lots: 503N, 513N, 568N and 5123N

You're going to love the overall dimension and eye-appeal of this bull. He'll grow on you as you walk him around the pen. Great depth of rib, clean sheath, and smooth through the neck and shoulders. Balanced EPDs that ranks him in the top 40% of breed in 15 traits. Donor 941G is among our favorites for her strength in maternal traits and excellent carcass merit. All four of these flush mates scanned well for IMF.

Good patterned bull with a wide base and a deep body. He's moderate in frame with extra power, thickness and overall dimension. Looking for an extra shot of heterosis from an off-the-beaten-path pedigree led us back to the 386 bull that was born in 1983 and made a splash in the industry. Like his sire, 77618, both bulls were ahead of their time producing progeny with phenotype that fits today's standards. Just look at the overall depth and capacity of this bull. We retained an interest in maternal brother 440M who sold to Giedd Hereford Ranch, ND.

- Flush brothers sell as lots: 576N and 586N
- Maternal brother is a stud and sells as lot 5228N
- Dam pictured on pg. 31

Nice set of flush brothers sell out of 3044L and 113J. They're all stout made, have eye appeal and are backed by some good cow families. In my opinion, this bull may be the best in the flush. Built right with good pigment, extra spring of rib and a clean sheath. Top-end calving ease that combines fertility and maternal with carcass merit. This bull weighed 800 lbs. at weaning. He ranks above breed avg. in all traits and top 15% for 15 of them. 524N doesn't have many, if any holes. Big scrotal and scanned well for both REA (112) and IMF (105).

- Flush brothers sell as lots: 529N, 563N and 5103N
- Dam pictured above
- Sale ranking: #3 for BW; #6 for CE, #7 for REA, #9 for BMI\$, CHB\$
- Top 10% for CE, BW, SC, SCF, MM, MCE, Udder, CW, BMI\$, CHB\$

Solid EPD panel that ranks this bull in the top 15% for all maternal traits as well as MARB and CHB\$. Low birth weight bull that gained over 4.2lbs./day and ratioed over 100 at both weaning and yearling. Dam traces back to the 910G cow who has been a solid producer with a VWR 101/5.

“

I have found that buying bulls with GE-EPDs has greatly improved our bottom line. They're an important tool and often times overlooked. I won't even attend a bull sale if the animals aren't DNA parent verified or GE-EPD tested.

”

It's money in the bank!

A very complete bull that ranks above breed average in nearly every trait. I've liked this guy since he was a calf. One of those that's always just had the "herd bull" look!! 527N has a red neck, good pigment and is well put together. He's thick-topped, with a strong quarter, clean sheath, has natural thickness, good neck extension and moves out with ease.

- Sale ranking: #1 MARB and BMI\$, #2 MM, #3 CHB\$, #4 MG
- Top 1% of the breed for SCF, MM, MG, BMI\$
- Top 5% for CW, MARB, CHB\$

Another good heifer bull out of 113J and 3044L that adds MARB to the package. This moderate sized bull has great carcass EPDs and the scan data to back them up. Top 25% for both BMI\$ and CHB\$. Calving ease and BW rank above 10% in the breed and fertility and maternal are all well above breed average.

Stylish, short-marked 381L son with good rib shape and a lot of substance. A very complete bull out of a young cow with a great future. Dam will likely enter our donor pen this year or next. She's a first calf heifer out of the 8171F cow who had a beautiful udder and lots of milk. This bull has an impressive spread from birth to yearling posting actual weights of 74 lbs., 790 lbs., and 1220 lbs. He ranks in the top 25% of the breed or better in 15 traits and scanned well for both REA and IMF.

With lots of eye-appeal and good dimension, this bull will catch your eye right off the bat. He'll grow on you further once you walk him around the pen. He has great depth of rib and lots of capacity, while remaining clean through the shoulders and neck. Gained just under 4lbs/day. Dam 978G is one of our favorite donors. She has a beautiful udder and her performance record is impressive: WWR 107/5, YWR 101/5. Maternal brothers of this bull sold in our sale last spring to Indian Mound Ranch, Johansen Herefords, Tarrant Herefords and David Pump Ranch. Maternal brother 241K is at work for Holden Herefords.

Similar to his flush brother 595N, this bull posted strong performance numbers gaining over 4 lbs/day. They're very similar in composition; both possess a lot of eye-appeal, have a good hip and solid muscle, have red necks and are red to the ground. 565N ranks in the top 25% or better for WW, YW, SC, MG, MCE and CW. Dam is a beauty that ranks in the top 2% of breed for udder and teat. She sold to Buford Ranches.

COOPER HEREFORD RANCH

“

We are very fortunate to have collected semen on countless Cooper bulls over the years, both as yearlings after the sale and later on as mature bulls. They are always standouts. Their disposition and phenotype is exceptional, and they are natural breeders with great libido and instinct. There have been several years we have gotten 8-12 Cooper sale bulls to mount, serve an AV, and freeze semen on their first collection day, which is no small feat for yearling bulls. In our opinion, there will never be too many Dominos at our place.

”

This 3044L son posted the 2nd highest actual weaning weight at 825 lbs. off a first calf heifer. Dam is an 0186H daughter that is among our favorites. Built right, this bull has a big top, good muscle and plenty of pigment and eye-appeal. EPDs are balanced and demonstrate excellence in performance while delivering on fertility, longevity and maternal. Ranks above breed average in 16 traits!

- Top 5% of breed for SC, MM, MG
- Top 25% WW, YW, CW

Big-time potential. One of only two 3142L sons offered this year. They're both good bulls and their flush mate heifers are looking the part. Deep bodied with a wide base, lots of muscle, capacity, and natural fleshing ability. Tremendous amount of thickness down the top of this free moving bull. Better than his picture portrays. This bull is a stud. Performance is bred throughout his pedigree. Dam has a WWR 108/2 and YWR 104/2. Gained 4.4 lbs/day. Scanned well for both REA and IMF. Ranks in the top 10% for MM, MG, Udder and Teat; top 25% WW, YW, Scrotal and CW.

This 386 calf might most closely resemble his sire in phenotype. 576N is a rugged bull with plenty of muscle and length. There's no doubt this pedigree has some performance behind it; 386 had an 855 lb. actual weaning weight. He scanned well for both REA and IMF. Similar to his flush brothers, 576N performed very well both on the cow and on test. These flush brothers will add pounds and produce some beautiful females.

This flush out of the iconic 386 bull really exceeded our expectations. Full brother 509N caught our eye out in the pasture, but this bull has really grown into himself the past six months. Another top performer at weaning at 790 lbs. He's short-marked, has good pigment, and you can't beat the cow families in this pedigree. Can't say enough about this donor cow and the consistency she breeds, especially for pigment and carcass merit. She scanned a REA ratio (110) and IMF ratio (107), and her progeny have an avg. REA (102/6) and IMF (107/6). The EPDs of these flush brothers certainly don't reflect their potential. Don't overlook the genetic power in this pedigree.

- Flush brothers sell as lots: 509N and 576N
- Maternal brother sells as lot 5228N
- Dam pictured above

Good bull out of an 0186 daughter that has a great udder. 589N is put together well. Don't miss the opportunity to snag one of only two 3190L sons selling. 589N ranks in the top 30% in 10 traits, with a pedigree package that combines pigment, maternal, and high udder quality. Paternal granddam was always one of our favorite cows.

YEARLING BULLS 2026

CL 1 DOMINETTE 6162D

Dam of 581N, 594N, 5102N

Super powerful cow that breeds performance into her progeny just like her mother, 055X. A 10-year-old cow with a good number of young females making an impact in our herd. 6162D raises calves that improve your herd and put money in your wallet. Her udder quality rivals that of dam 055X. The daughters out of her sons, 0186H and 1176J, are the kind you want to keep; moderate, deep ribbed and nearly all have perfect udders.

Donor 978's natural calf. Full pigment and extra thickness that carries from his shoulders through the middle and down into his hip. This bull has plenty of room to grow. Should sire females with excellent udder structure and good production. 5117N had a 715 lb. actual weaning weight and gained 4.0 lbs/day. He's a 3/4 brother to herd sire 241K at use at Holden Herfords and EF1 Cattle Co. Ranks in the top 10% for SC, MM, MG, Udder and Teat. Pictured right with dam 978G.

Dam of 5117N, 506N, 522N, 536N, 560N, 577N

Dam 9119W's use in our herd really contributed to some top-notch udder quality. This donor out of her is no exception. A moderate cow with a nice level top and good muscle. Good calving ease and an EPD panel stacked with outstanding maternal traits. We have some nice young females rising up through our program out of this cow and she's produced an array of outstanding herd sires that have gone to other seedstock operations.

This 3044L son posted top-end gains from birth to yearling and has a pedigree full of maternal excellence. Moderate in frame, he's marked up good, has a deep body and a wide base. Plenty of power and extra thickness and dimensional. Weighed 760 lbs. at weaning and gained 4.3 lbs./day. There's plenty of power on the bottom side of this pedigree. Dam 280K sold to Haxton Hoffman. In my opinion, she is our best 0186H daughter to date. Phenotypically she's ideal and has a perfect udder. Great granddam 975G is a maternal sister to herd sire 105Y. There's a lot to love about this bull and pedigree in general.

- Sale ranking: #5 for BW and MARB; #9 for CE; #10 for BMI\$ and CHB\$
- Top 20% of breed in 14 traits
- Top 5% for MM, MCE, Udder, Teat, BMI\$, CHB\$
- Top 10% or better for CED, SCF, MG, MCW, CW and MARB
- Dam 280K pictured above and with calf 5121N at side

Retaining: 1/2 Possession + 1/4 In-Herd Use

These 348L sons all have a lot of style, which you'll appreciate once you see them. 5130N really pulls it all together. He's short-marked, has 100% pigment, a clean sheath, and loads of performance in his pedigree. Shared the top actual weaning weight at 880 lbs. with 5187N and continued to perform very well on test ending with a 1320 lb. actual yearling weight. He's super attractive. Free moving bull with a wide base, deep body and good neck extension. Dam is a role model 710E daughter with a near perfect udder. She has a WWR (105/4), a YWR (103/4) and IMF ratio (120/4). Don't overlook this bull and the built-in maternal, performance and carcass merit he brings to the table.

- Ranks top 10% for WW, YW, SC, MCE and CW.

Good bull with a 39 inch scrotal and a 770 lb. actual weaning weight. He has continued to build muscle and gets stouter every day. Dam is a bigger framed 0187H daughter with a WWR (102/2) and YWR (101/2). 381L brings a lot to this package including added udder quality. 5156N will sire some easy-doing calves that will gain! Ranks top 2% SC, top 10% WW; top 20% YW and MARB.

Calving ease prospect out of our standout sire 267K. This bull is a full sibling to 2025 sale-topper 456M, who has proven to be a low birth weight calving ease specialist with his first round of calves hitting the ground this winter. This bull should follow suit. He weighed 690 lbs. at weaning and gained 3.7 lbs/day on test. Flush brother sells as lot 5192N.

Stout made with plenty of muscle and a deep middle. One of only a few 2114K sons selling. Weighed 685 lbs. at weaning and really showed his growth potential gaining 4.2 lbs/day. Ranks in the top 30% of the breed or better in 11 traits!! Backed by a solid producing 710E daughter.

KA-CHING.

MORE POUNDS. MORE CALVES. MORE PROFIT.

Hereford bulls increase net profit by \$51 per cow per year. That's \$20,000 in additional revenue for a typical 400-cow outfit, thanks to increased fertility and herd size. Herefords are also the efficiency experts, proven to add value to calves in the feedyard — \$30 per head in profitability. That's real money and real results.

COME HOME TO HEREFORD.

This 9100G son has some potential. He's stout made, with good length of body and depth of rib. A real looker with a red neck and 100% pigment. Dam is a first calf heifer and one of a few 0136H daughters we have. Loads of maternal strength and good udder quality on both the top and bottom side of this pedigree. Bred-in marbling on both sides as well. 5165N ranks in the top 10% WW and YW; top 20% or better WW, YW, MG, MCE, CW, MARB and CHB\$. Scanned well for IMF.

From his middle to his rear quarter this bull has some capacity and volume. Great granddam 7136T had an excellent udder and is on both the top and bottom side of this pedigree. And the 617S donor that sold to Baumgarten Cattle Co. is a generation back as well. Comes as no surprise that his dam has always been a solid producer for us. Don't miss firing on this red-necked bull that's red to the ground, has eye-appeal and lots of muscle.

This heifer bull is square-made and stands really correct on his feet. He's a full brother to high seller 456M. An ET calf that was orphaned mid-way through summer and still weighed 675 lbs. at weaning. He continues to add pounds and fills out every day. He's stout. Sky's the limit for this one. Great neck extension and calving ease potential. Ranks top 5% for SCF, MCE and BMI\$; top 15% CED and top 25% BW.

Another good 386 son that will catch your eye out in the pen. Similar in composition to paternal brothers 509N, 576N and 586N, this bull has style. He's correct made and really moves out freely. Extra spring of rib, good bone and a nice hip won't leave you wanting much more. Good performance in the feedlot with a 3.7 lb. ADG. Dam is an awesome 7131E daughter with a stellar production record: WWR (110/3) and YWR (107/3). She ranks in the top 30% of breed in 13 traits, including top 2% for WW and YW. We think these 386 sons have a lot to offer.

Really not sure if you can put much more body into a bull. 5207N carries some red meat and mass. A 3197L son with a thick top, he's red to the ground, has a red neck and great eye pigment. He's the full package. This guy will develop into a great breeding bull. Ranks in the top 5% of the breed for WW, YW, MG and Teat. His progeny will put the pounds on and daughters will have good udders. Dam is another full sister to herd sire 3142L and maternal brother to 1143J who sold to Three Hills Ranch. Backed by performance donor 9190G, there aren't many holes in this pedigree.

Donor cow 1189J's natural calf! 5228N is going to have a lot of friends on sale day. He's been at the top of my list for some time now. He has the potential to be an industry changer. A very sound built bull that's correct-made with a big top, extra muscle and lots of overall thickness and dimension. Lots of extra power in his moderate frame with extra pigment and loads of eye-appeal. Moves out freely and looks like a herd sire no matter what angle you view him from. Scanned well for both REA and IMF. Born in February, 5228N still weighed over 700 lbs. at weaning and gained 3.9 lbs/day which adjusted to 1324 lbs. Can't say enough good things about his dam, 1189J, who has a REA ratio (103/6) and an IMF ratio (107/6). Throw in 0159H on the top side and there's a lot of proven carcass merit in this pedigree.

- Top 5% of breed for WW, YW, SC, MG, CW, BMI\$ and CHB\$
- Top 10% for SCF, MG, REA and MARB
- Sale ranking: #1 for CHB\$, #2 BMI\$, #3 REA, #4 MARB, #5 WW, #6 YW
- Maternal brothers sell as lots: 509N, 576N and 586N

Don't overlook this top prospect out 394L. Gaining 4.5 lbs./day on test will have 5230N looking a lot different come sale day. As one of the youngest calves selling, you're going to appreciate his overall dimension and the eye appeal he offers. Great depth of rib, he's smooth through the neck and shoulders and has a clean, tight sheath. Another February calf that still managed to weight over 700 lbs. at weaning and posted the 2nd highest 365 day weight at 1417lbs. Dam 1185J has a WWR (101/3) and YWR (105/3). She's a maternal sister to herd sires 0186H and 1176J, and lots: 581N, 594N, 5175N and 5177N. Can't beat this pedigree that's rooted deep in performance with maternal excellence and carcass merit.

* Effective Progeny Number Increase (EPNI)- EPNI is the difference gained for genotyped animals versus non-genotyped animals.

Each animal tested is recognized with the AHA GE-EPD logo.

The benefits of GE-EPD

Buying animals that have a genomic profile incorporated into their Expected Progeny Difference (EPD) offers many advantages that allow for quicker breed and herd improvement. The table to the left shows the average increase in accuracy when buying a young animal with Genomic Enhanced EPD (GE-EPD) versus an animal without a GE-EPD. As you'll see, buying a young animal that has been genotyped is like having 2-17 progeny, depending on the traits.

Cooper Hereford Ranch has utilized technological advancements and real world data to evaluate and trait select within our herd for well over five decades. We were among the first Hereford breeders to run GE-EPDs on our entire herd & each subsequent calf crop. That's over 12 years of increased accuracy, further increasing the predictability our cattle offer.

 **ALL animals selling have GE-EPDs**

“ I have found that buying bulls with GE-EPDs has greatly improved our bottom line. They're an important tool and often times overlooked. With all the data we collect here on the ranch I can prove in black and white they've improved our herd and increased our bottom line. I won't even attend a bull sale if the animals aren't DNA parent verified or GE-EPD tested. It's money in the bank! ”

- Paul Koffskey, Groendyke Ranch

Understanding Hereford EPDs

The American Hereford Association (AHA) currently produces expected progeny differences (EPDs) for 17 traits and calculates three profit indexes. AHA's genetic evaluation makes use of a Marker Effects Model that allows the calculation of EPDs by incorporating the pedigree, phenotypic and genomic profile of an animal. Animals that have a genomic profile will be denoted with GE-EPD logo.

The current suite of Hereford EPDs and profit indexes includes:

Calving Ease — Direct (CE)

CE EPD is based on calving ease scores and birth weights and is measured on a percentage. CE EPD indicates the influence of the sire on calving ease in females calving at 2 years of age. For example, if sire A has a CE EPD of 6 and sire B has a CE EPD of -2, then you would expect on average, if comparably mated, sire A's calves would have an 8 percent more likely chance of unassisted calving when compared to sire B's calves.

Birth Weight (BW)

BW EPD is an indicator trait for calving ease and is measured in pounds. For example, if sire A has a BW EPD of 3.6 and sire B has a BW EPD of 0.6, then you would expect on average, if comparably mated, sire A's calves would come 3 lb. heavier at birth when compared to sire B's calves. Larger BW EPDs usually, but not always, indicate more calving difficulty. The figure in parentheses found after each EPD is an accuracy value or reliability of the EPD.

Weaning Weight (WW)

WW EPD is an estimate of pre-weaning growth that is measured in pounds. For example, if sire A has a WW EPD of 60 and sire B has a WW EPD of 40, then you would expect on average if comparably mated, sire A's calves would weigh 20 lb. heavier at weaning when compared to sire B's calves.

Yearling Weight (YW)

YW EPD is an estimate of post-weaning growth that is measured in pounds. For example, if sire A has a YW EPD of 100 and sire B has a YW EPD of 70, then you would expect on average if comparably mated, sire A's calves would weigh 30 lb. heavier at a year of age when compared to sire B's calves.

Dry Matter Intake (DMI)

The DMI EPD predicts the daily consumption of pounds of feed. For example, if sire A has a DMI EPD of 1.1 and sire B has a DMI EPD of 0.1, you would expect sire B's progeny, if comparably mated, to consume on average 1 pound of feed less per day.

Scrotal Circumference (SC)

Measured in centimeters and adjusted to 365 days of age, SC EPD is the best estimate of fertility. It is related to the bull's own semen quantity and quality, and is also associated with age at puberty of sons and daughters. Larger SC EPDs suggest younger age at puberty. Yearling sons of a sire with a 0.7 SC EPD should have yearling scrotal circumference measurements that average 0.7 centimeters (cm) larger than progeny by a bull with an EPD of 0.0 cm.

Sustained Cow Fertility

The AHA's new SCF EPD is a prediction of a cow's ability to continue to calve from three years of age through 12 years of age, given she calved as a two-year-old. The EPD is expressed as a deviation in the proportion of the 10 possible calvings to 12 years old expressed as a probability. For example, the daughters of a bull with a 30 EPD would have the genetic potential to have one more calf by age 12 than the daughters from a bull with a 20 EPD. In other words, the daughters from the 30 EPD bull would have a 10% greater probability of having one more calf than the bull with a 20 EPD. This is equivalent to saying that the daughters are 10% more likely to remain in the herd to age 12.

Maternal Milk (MM)

The MM EPD of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. Daughters of the sire with a +14 MM EPD should produce progeny with 205-day weights averaging 24 lb. more (as a result of greater milk production) than daughters of a bull with a MM EPD of -10 lb. (14 minus -10.0 = 24 lb.). This difference in weaning weight is due to total milk production during the entire lactation.

Maternal Milk & Growth (M&G)

The M&G EPD reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of the daughter's progeny weaning weight. A bull with a 29 lb. M&G EPD should sire daughters with progeny weaning weights averaging 19 lb. heavier than progeny of a bull's daughters with a M&G EPD of 10 lb. (29 minus 10 = 19 lb.). It is expected to one-half the sire's weaning weight EPD, plus all of his MM EPD. No accuracy is associated with this since it is simply a mathematical combination of two other EPDs. It is sometimes referred to as "total maternal" or "combined maternal."

Maternal Calving Ease (MCE)

MCE EPD predicts how easily a sire's daughters will calve at two years of age and is measured on a percentage. For example, if sire A has a MCE EPD of 7 and sire B has a CE EPD of -3, then you would expect on average if comparably mated, sire A's daughters would calve with a 10% more likely chance of being unassisted when compared to sire B's daughters.

Mature Cow Weight (MCW)

The MCW EPD was designed to help breeders select sires that will either increase or decrease mature size of cows in the herd. The trait was developed after years of cow weight data collection and the EPD relates directly to the maintenance requirements of a cow herd. For example, if sire A has a MCW EPD of 100 and sire B has an EPD of 85, then you would expect the females of sire A, if comparably mated, to be 15 lb. heavier at mature size.

Udder Suspension (UDDR)

UDDR EPDs are reported on a 9 (very tight) to 1 (very pendulous) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment.

For example, if sire A has a UDDR EPD of 0.4, and sire B has a UDDR EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score better udder suspension in daughters of sire A, compared to sire B.

Teat size (TEAT)

TEAT EPDs are reported on a 9 (very small) to 1 (very large, balloon shaped) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment.

For example, if sire A has a teat size EPD of 0.4, and sire B has a teat size EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score smaller teat size in daughters of sire A, compared to sire B.

Carcass Weight (CW)

CW EPD is a beneficial trait when considering the impact that pounds have relative to end product value. At the same age constant endpoint, sires with higher values for carcass weight will add more pounds of hot carcass weight compared to sires with lower values for carcass weight. For example, if sire A has a CW EPD of 84 and sire B has a CW EPD 64, then you would expect the progeny of sire A, if harvested at the same age constant endpoint, to have a 20-lb. advantage in terms of hot carcass weight.

Rib Fat (FAT)

The FAT EPD reflects differences in adjusted 365-day, 12th-rib fat thickness based on carcass measurements of harvested cattle. Sires with low, or negative FAT EPDs, are expected to produce leaner progeny than sires with higher EPDs. Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Ribeye Area (REA)

REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better-muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Marbling (MARB)

MARB EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat, [IMF]) based on carcass measurements of harvested cattle. Breeding cattle with higher MARB EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Baldy Maternal Index (BMIS)

The BMIS is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed towards Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability from finishing of non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

Brahman Influence Index (BIIS)

The BIIS is a maternally focused index that is based on a production system that uses Brahman x Hereford cross cows. Progeny of these cows are directed towards a commodity beef market since Certified Hereford Beef® does not accept Brahman influenced cattle. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability in finishing non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep harvested progeny successful for a variety of commodity based programs. This index targets producers that use Hereford bulls on Brahman influenced cows.

Certified Hereford Beef Index (CHBS)

CHBS is a terminal sire index that is built on a production system where Hereford bulls are mated to mature commercial Angus cows and all progeny will be targeted for Certified Hereford Beef® after the finishing phase. This index has significant weight on Carcass Weight to ensure profit on the rail. As well there is a positive weighting for Average Daily Gain along with a negative weighting on Dry Matter Intake to ensure efficient pounds of growth in the finishing phase. Keep in mind, this production system takes advantage of complimentary breeding with the commercial Angus cow. Although Marbling is weighted positively in this index, a positive weighting for Rib-eye Area and a negative weighting for Back Fat are a greater priority in this index to allow for optimum end-product merit. This is the only index that has no emphasis on fertility. Remember that no replacement heifers are being retained.

COOPER HEREFORD RANCH

CLI cows

It takes generations of conscientious breeding and a commitment to maintaining strict culling standards to build a foundation herd. We've been in the seedstock business 80 years and remain committed to raising cattle that breed predictability and consistency in the pasture, across the scale, and on the plate.

Find more information about this value added program at

www.hereford.org/commercial/

65% of the heifers selling this year are BMI\$ qualifiers. **\$376**

The Maternal Advantage program generates females with added longevity, more docility, increased fertility and more profit per year.

Our Crew

One of the greatest challenges our Industry faces today is the shortage of skilled workers who are willing to devote their time and energy to an operation. We are so blessed to have a small, but mighty crew. We appreciate their commitment to our operation and willingness to work extra hours when the seasons demand.

"El Jefe"

Thank You

In addition to those who contribute their professional services to our operation throughout the year, there is also a large group of individuals working ringside and on the auction block who help ensure our sale runs smoothly. THANK YOU - your expertise, professionalism & dedication do not go unnoticed.
