---	---	--

Arguably one of the greatest Angus cows of the breed! She stems from the same Primrose cow family that produced N Bar Emulation EXT. We purchased this great donor female from Musgrave Angus this past spring. She was bred to have a fall calf and has a phenomenal son of SAV International at her side. She is now in our "Donor-Pen" and you will see many sons and daughters out of her in the coming years. Primrose is great in her udder shape, massive in her rib, excellent feet and legs, long made and feminine as you can make one!

Dear Fellow Cattlemen,

Thank You for your interest in our 11th Annual Production Sale. There have been a lot of exciting things happen at Bobcat Angus over the last year, but none more exciting than having the first Musgrave Big Sky calves hit the ground! The calves from all over the United States were born with very moderate birthweights and then take off and grow.

In March we were also fortunate to be able to purchase his dam. You can see her information on the inside back cover.

All of the registered cattle in this sale have been i50K tested through Zoetis and the American Angus Association. In a few short years our entire cowherd will be i50K tested as we attempt to bring all of you cattle with increased accuracy for all the economically important traits.

Bulls will sell in catalog order with the Two-Year-Old bulls selling first, followed by the Fall Yearlings and then the very first Big Sky bull calves will sell. Many of these are natural born calves with a few E.T. scattered in as well. We know you are going to like them.

The seven year old registered cows will sell following the bulls. This is by far and away the best set of cows that we have ever offered up for sale and it is certainly "going-to-leave-a-mark" in selling this age group of cows. A big majority of these cows carrying the service of Big Sky.

The commercial bred females in the sale offering are our best set to date. The 2 Coming 3 Year Old cows were A.I. bred to Big Sky and you will be able to purchase load lots carrying bull or heifer calves. The steer calves on our own commercial cows are definitely some of the best that we have ever had on the place. Get in on the ground floor with Big Sky...You won't be sorry!

The commercial bred heifers were A.I bred to WK Bobcat and Bobcat Black Diamond and will definitely be weighing on top of 1100 pounds by sale day. All of the commercial bred cows and heifers were ultrasound pregnancy checked by Dr. Ralph Miller and will be sorted sale day for calving dates and sex.

To sum things up...we here at Bobcat Angus feel this is the best set of stock from start to finish that we have ever offered to the buying public. We thank you for your consideration in our program. We will have a little get together the night before the sale so if you can make it please contact us so we can make our supper plans.

Thanks Again,
THE BOBCAT CREW

FIRST BREEDING SEASON GUARANTEE

All bulls selling for \$2,000 or more will be covered 50% by Bobcat Angus, if they are injured during their first breeding season. This guarantee does not include death as that can be insured for. Breeding season is defined as a 60 day period following the first turnout of bulls. Fifty percent of the value of the injured bull, minus one-half the salvage value, will be given credit in a future Bobcat Angus sale or toward a replacement bull if one is available. Salvage value, if any, will be split equally between Bobcat Angus and the buyer. All injured bulls must be diagnosed by a veterinarian. We also reserve the right to a second opinion by a veterinarian of our choice. Please notify us as soon as possible should injury occur and prior to the injured bull being sold for salvage. All claims must be made by September 1, 2016.

i50K™ provides Angus breeders with accurate predictions of genetic merit for economically relevant traits leveraging cost-effective genotyping platforms

DIFFERENCES BETWEEN i50K AND HD 50K

With the introduction of i50K, Zoetis and AGI will help usher in a new era for obtaining GE-EPD, accuracy values, dollar indexes and included parentage verification for registered Angus cattle.

An important consideration when evaluating the use of low density genotypes is imputation accuracy. Importantly, this must be assessed in two ways. The first is by evaluating the proportion of 50K markers that are correctly imputed from analysis of the lower density genotypes. This is performed by comparing actual and imputed 50K genotypes from animals tested on both platforms.

Extensive quality control testing of the Angus imputation pipeline at Zoetis Genetics using low density genotypes demonstrates a high degree of concordance (agreement), with more than 98% of 50K markers correctly imputed.¹

The second component of assessing imputation accuracy is evaluation of the correlation between genomic predictions derived from imputed genotypes and those from actual 50K genotypes. This is important because although there may be slight differences in the imputed genotypes, the critical question involves the impacts of these differences on the MVP for various traits. It is exciting to confidently report that for the current AGI calibration, the correlation between MVP derived from imputed genotypes with those obtained from actual HD 50K genotypes ranged between 0.99 and 1.00 for all traits supported by the AGI evaluation.¹ Effectively this means that there is no difference in estimated genetic merit based on i50K vs. HD 50K genotypes.

2 COMING 3-YEAR OLD ANGUS BRED COWS

LOT 207 34 COWS

2 coming 3 year old bred Black Angus Cows
AI bred to Musgrave Big Sky on June 2-3
Carrying bull calves
Due: March 5-15

GREEN TAGS

LOT 210 65 COWS

2 coming 3 year old bred Black Angus Cows
Pasture bred to sons of Bobcat and Lombardi
35 carrying heifer calves & 30 carrying bull calves
Due: March 15-April 5

PINK TAGS

LOT 208 30 COWS

2 coming 3 year old bred Black Angus Cows
AI bred to Musgrave Big Sky on June 2-3
Carrying heifer calves
Due: March 5-15

GREEN TAGS

LOT 211 20 COWS

2 coming 3 year old bred Black Angus Cows
Pasture bred to sons of Bobcat and Lombardi
Carrying both sexes
Due: April 15-May 15

BLACK TAGS

LOT 209 15 COWS

2 coming 3 year old bred Black Angus Cows
AI bred to Musgrave Big Sky on May 27
9 carrying heifer calves & 6 carrying bull calves
Due: Feb. 27-March 7

BLUE TAGS

500 BRED COMMERCIAL HEIFERS

We are offering 500 heifers. Of these heifers 230 are one iron home raised out of our commercial Angus herd and are AI bred to Bobcat Black Diamond. In addition, there are 250 no brand heifers that were AI bred to WK Bobcat on June 1st. We purchased these heifers from herds of producers that have been in the business for many years. Eighty percent of our commercial cows are the result of 25 years of an extensive AI program. They are sired by sons of VRD, Yellowstone, Nebraska and WK Bobcat who has become an integral part of our cow herd. They are a very fancy set of heifers which will raise AI sired calves that will wean off 700 pound steer calves and 650 pound heifer calves, depending upon environment. The heifers are ultrasound pregnancy tested by Dr. Ralph Miller. They have been vaccinated with Virashield 6, Scour Box 4 and Ivomec.

Selling as commercial heifers

Registration papers available for \$100

Bred to Vermilion Markout

Due to calve: April 1-30

Carrying bull and heifer calves

Eartag : blue with white numbers

223 20 COWS

3 to 7 year old cows

Bred to X Factor and Bobcat Sons

Carrying bull and heifer calves

Eartag : red

224 35 COWS

Ten year old cows

Pasture bred to X Factor and Bobcat Sons

Carrying bull and heifer calves

Due to calve: March 20-May 1

Eartag : blue

If, for any reason, the buyer should like to use their own veterinarian, Bobcat Angus will reimburse any open cows within fifteen days of the sale. Bobcat Angus will not be liable for any open females more than fifteen days past the sale date.

American Angus Association® Selection Tools

Expected Progeny Difference (EPD), is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I", and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

Accuracy (ACC), is the reliability that can be placed on the EPD. An accuracy of close to 1.0 indicates higher reliability. Accuracy is impacted by the number of progeny and ancestral records included in the analysis.

GROWTH

Calving Ease Direct (CED), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight EPD (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight EPD (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Residual Average Daily Gain (RADG), feed efficiency expressed in pounds per day, is a predictor of a sire's genetic ability for postweaning gain in future progeny compared to that of other sires, given a constant amount of feed consumed.

Yearling Weight EPD (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

Yearling Height EPD (YH), is a predictor of a sire's ability to transmit yearling height, expressed in inches, compared to the that of other sires.

Scrotal Circumference EPD (SC), expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

Docity (DOC), is expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility. It predicts the average difference of progeny from a sire in comparison with another sire's calves.

MATERNAL

Heifer Pregnancy (HP), is a selection tool to increase the probability or chance of a sire's daughters becoming pregnant as first-calf heifers during a normal breeding season. A higher EPD is the more favorable direction, and the EPD is reported in percentage units.

Calving Ease Maternal (CEM), is expressed as a difference in percentage of unassisted births with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

Maternal Milk EPD (Milk), is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

Mature Weight EPD (MW), expressed in pounds, is a predictor of the difference in mature weight of daughters of a sire compared to the daughters of other sires.

Mature Height EPD (MH), expressed in inches, is a predictor of the difference in mature height of a sire's daughters compared to daughters of other sires.

Cow Energy Value (\$EN), expressed in dollars savings per cow per year, assesses differences in cow energy requirements as an expected dollar savings difference in daughters of sires. A larger value is more favorable when comparing two animals (more dollars saved on feed energy expenses). Components for computing the cow \$EN savings difference include lactation energy requirements and energy costs associated with differences in mature cow size.

CARCASS

The genetic evaluation produces a single set of EPDs for carcass weight, marbling score, Ribeye area and fat thickness. The units of measure are in carcass trait format and analyzed on an age-constant basis.

Carcass Weight EPD (CW), expressed in pounds is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Marbling EPD (Marb), expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area EPD (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Fat Thickness EPD (Fat), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

\$VALUE INDEXES

\$Value indexes, are multi-trait selection indexes to assist beef producers by adding simplicity to genetic selection decisions. \$Values are reported in dollars per head, where a higher value is more favorable. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires in the database if the sires were randomly mated to cows and if calves were exposed to the same environment.

Weaned Calf Value (\$W), an index value expressed in dollars per head, is the expected average difference in future progeny performance for pre-weaning merit. \$W includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk, and mature cow size.

Fleddot Value (\$F), an index value expressed in dollars per head, is the expected average difference in future progeny performance for postweaning merit compared to progeny of other sires.

Grid Value (\$G), an index value expressed in dollars per head, is the expected average difference in future progeny performance for carcass grid merit compared to progeny of other sires.

Quality Grade (\$QG) represents the quality grade segment of the economic advantage found in \$G. \$QG is intended for the specialized user wanting to place more emphasis on improving quality grade. The carcass marbling (Marb) EPD, which is influenced by carcass marbling scores and ultrasound percent intramuscular fat (% IMF) measurements, contribute to \$QG.

Yield Grade (\$YG) \$YG represents the yield grade segment of the economic advantage found in \$G. \$YG is intended for the specialized user wanting to place more emphasis on red meat yield. It provides a multi-trait approach to encompass ribeye, fat thickness and weight into an economic value for red meat yield.

\$G combines both \$QG and \$YG, and may be the best carcass decision tool for focusing on quality and red meat yield simultaneously.

Beef Value (\$B), an index value expressed in dollars per head, is the expected average difference in future progeny performance for postweaning and carcass value compared to progeny of other sires.

John Goggins

It's BIG SKY!

Weaning weights on Big Sky calves have been coming in from all over the United States. So far 156 calves have a birthweight ratio of 100 and weaning weight ratio of 102.
