for bidding information.

All Bulls Carcass Ultra-  
Sounded & tested  
negative for PI BVD.  
Bulls wintered free until April 1.

# Calving Ease Bulls Raised the Commercial Man's Way

**Mc Cumber Tremendous 2008**  
50 Sons Sell.

*With two of the best cow families in the breed behind him, expect 2008 to sire females with very good teats and udders, depth of body, fleshing ability and fertility. He has been one of the most consistent calving ease bulls we have used. His calves have displayed excellent vigor at birth with above average muscle & performance.*

## A Ranch's Profit Starts With A Live Calf

**OCC Emblazon**  
12 Sons Sell.

*OCC Emblazon 854E is recognized as the cow efficiency leader in the angus breed. Over 90 bulls sell carrying his influence. Daughters are easy fleshing with superb udders. He is a dominant, uniform sire that combines big REA with calving ease & high \$EN & \$W.*

Dam of 2008. His daughters will be the same type and kind.

Grand Dam of 2008.

**Mc Cumber 235 Fortunate 4154**  
17 Sons Sell.

*4154 is out of a full sister to 2008. Expect the same kind of females as the cows pictured. 4154 was born with a 68 lb. actual birthweight yet he outgained all other calves in his calf crop to post a 4.67 ADG with an REA of 14.6. He is a long, deep bodied bull with excellent spring of rib. Stands square on his feet with a deep well muscled quarter.*

**F**ollowing the same philosophy of the summer calving Range Calved - Range Raised<sup>®</sup> program. All spring cows calve out on their own with a focus on lighter birthweight genetics. They are bred to produce moderate framed, heavy muscled, good boned progeny that thrive on native forage and practical management to lower your production costs and increase your profitability.

### COST EFFICIENCY = PROFITABILITY

**F**or a commercial operation to generate a high level of cost efficient production, it must have a cow herd which will cope with fluctuating nutritional conditions and still be productive without requiring high levels of supplemental feeding. A low maintenance, productive cow herd that can efficiently utilize available resources is the key. This is a function of body type and not EPD's or other numbers.

All cattle do well when fed grain as it is an environment providing a constant level of ideal nutrition. Not all cattle do well in a grass-based environment with fluctuating levels of nutrition. Any stand alone commercial breeding operation targeting maximum sustainable net profit is virtually a total grass based production system. At Redland Angus we are raising our cattle in the same method most of our commercial customers do and have found that only generations of cows bred to meet these requirements stand the test.

A commercial producers net profit is tied to their herds ability to efficiently utilize what grass is available throughout the year. The same is true for us and the cattle we produce and offer for sale.

**OCC Paxton 730P**  
9 Sons Sell.

*A high volume, easy doing, big REA sire. This group of sons looks very strong. Paxton sires extra volume, muscle & fleshing ability along with a +36.09 \$EN score that reflects the efficiency his daughters are transmitting.*

**Papa Forte 1921**  
6 Sons Sell.

*We have brought Forte back in to our program for the type and kind of cattle that he produces. Excellent calving ease and calf vigor, moderate framed "easy fleshing females with good fertility". TRUE GRASS BASED GENETICS.*
