Lot 5 – The breeding of this ET calf made use of all of today's current technology. His dam was an ET calf whose 50K data caught my eye because of her progeny performance. We purchased this calf with Les Craft from Curtins in Indiana. Then used IVF technology taking her oocytes as a virgin heifer, mating in petrie dish to Power Tool who also is top end 50K. This calf and his three siblings have all been genotyped. His two full brothers sell in the top 10m percent of Midland's sale, so the performance predicted by genotyping came true.

Lot 115 – Calving ease ET from Great Falls' full sister. GGP enhanced predictability.
