24th Annual Spring Bull Sale

March 11, 2026 | 1:00 PM (MT) | Dillon, MT

312 Yearling, PAP-Tested Angus Bulls
200 Open Commercial Replacement Females

24th Annual **Spring Bull Sale**

March 11, 2026 | 1:00 PM (MST) | Dillon, MT

There's no doubt it's a great time to be in the cattle business. Record-high markets over the past year have brought renewed optimism across the industry. Even more encouraging, cow inventories continue to decline, which points to several more strong years ahead. That creates a real opportunity to invest in quality genetics that will help keep your operation profitable for years to come.

Sitz Angus has been in the cattle business for over 100 years, however our goals remain the same. We want to provide you, our customers, with genetics that will not only keep you profitable today but will create a lasting impact for your operation in the future. We accomplish this by using all the tools in our tool box, both phenotypically and genomically. We demand our cattle have good feet, sound udders, and acceptable disposition. Our cattle are genomically tested to improve the accuracy of genetic predictions and to confirm parentage. All the bulls are PAP tested and freeze-branded for easy identification. We are proud to say this is the strongest, most complete set of bulls we have ever offered.

We know this is a busy time of year for everyone, and while we always enjoy visiting with our customers in person, we also understand that not everyone can make it. For that reason, we have provided multiple ways to participate in the sale, including online options through Northern Livestock Video and LiveAg.

Customer satisfaction has always been a top priority here at Sitz Angus Ranch. Our goal is simple—to earn your business not just once, but year after year. We truly appreciate your friendship, your trust, and your continued support.

If there is anything we can do to help aid you in your selection process or answer any questions that you may have about our program, please don't hesitate to call or stop by anytime. We are always available to give you a tour of our bulls and our operation anytime prior to the sale.

We would like to invite you to join us for our pre-sale social and tri tip dinner the evening of Tuesday, March 10. Our sale day festivities begin on March 11 with an all day viewing of the sale cattle, lunch at 11:00, and the sale at 1. We look forward to seeing you all on sale day!

Sincerely,

The Sitz Family

PAP Tested for Over 27 Years

Pulmonary Arterial Pressure (PAP):

Pulmonary Arterial Pressure (PAP) testing is used in cattle as a predictor of susceptibility of High Mountain Disease (HMD) which is a direct result of decreased oxygenation (hypoxia). There are many factors that can lead to the presentation of disease in individual animals. The PAP test is currently the gold standard for testing genetic and environmental components of the disease because not all animals with a high PAP test show outward signs.

Key Factors in Understanding PAP Scores:

Elevation does matter: As elevation increases, the likelihood of cattle becoming hypoxic and elevating their PAP score increases. Scores taken below 5000 feet are less reliable than scores taken over 5000 feet because fewer cattle are hypoxic at lower elevations. As cattle move to an elevation over 5000 feet, the hypoxic state of their lungs increases which increases the reliability of the PAP score. The longer the cattle being tested live at higher elevations, the more reliable the test becomes. Generally, tests in animals living at increased elevations for less than 30 days are not considered reliable. Ideally animals to be tested at elevation will be in that environment for a minimum of 45-60 days.

Age does matter: As cattle mature, they undergo many changes in their cardiopulmonary system affecting the PAP score. These changes can positively or negatively influence the PAP score. Testing of cattle at young ages should only be used as a management tool. It has more variability and less reliability and accuracy than testing of older cattle. It is preferable to test cattle that are at least 12-months old. As cattle reach 18-24 months of age there is an increased reliability of the test for that animal at that elevation. Once cattle are over 2 years of age, there is typically very little change in their PAP score unless other environmental factors have contributed to an increase (e.g., respiratory infections, intensive feeding programs, significant changes in elevation, cardio toxic plants, etc.).

Picking your ideal animal based on PAP Score: PAP scored animals are typically assigned a specific number in a point system. However, animals should be evaluated in ranges rather than by specific numbers. Statistically, for similar elevations, many animals over a score range (2-4pts) have the same likelihood of succumbing to HMD. Furthermore, the accuracy of the testing equipment is +/- 1 point. Don't let your ideal animal get away for a few points on the PAP score. Consider all animals below and up to a few points above the ideal score for your elevation. Animals that score 50 and above should not be used in higher elevation settings as they are highly likely to contract HMD. Even at higher elevations, there is a percentage of lower testing animals that will have increasing scores and show outward signs of HMD. As the elevation increases this percentage decreases and improves the accuracy of the score. This is why it is ideal to retest your animals once they are at increased elevations for the recommended period of time.

Final Thoughts:

1. Test animals at higher elevations to increase test accuracy.
2. Testing of cattle over 12 months of age increases test accuracy.
3. Choose animals for consideration in point ranges rather than specific test points.
4. Choose animals that have lived longer at elevations over 5000 feet before testing to increase reliability of the test.

Proud Participant in

SITZ Angus has been measuring and selecting for maternal excellence for decades and has participated in the MaternalPlus™ program since its inception. The program is designed to capture additional reproductive trait data and, ultimately, expand reproductive and lifetime productivity in herds.

By voluntarily submitting all our data to MaternalPlus and by performing a deeper dive into even more economically relevant traits, SITZ Angus is able to offer an unparalleled transparency to our customers that allows them to make informed decisions based on maternal genetics. Our dedication to the “mamma” cow is why the SITZ prefix is so prevalent in the top percentiles of the new \$M index that measures profitability at the ranch level.

“It was a big commitment for SITZ Angus to submit data for the voluntary MaternalPlus whole-herd reporting program. They were one of the first to account for every female in their operation through the program, but it has helped set themselves apart from other breeders and allowed them to make educated decisions based off data from every cow on the ranch.”

Kelli Retallick, AGI Genetic Service Director

Going the Extra Mile

All Bulls Have Been DNA Tested and Have GE-EPDs

There is little room for error in the cattle business and SITZ Angus is taking every measure to provide you with the most advanced information to help you make your buying decision. Every bull in the offering has been DNA tested and has genomically enhanced EPDs.

Genomic enhanced EPDs (GE-EPDs) are used to enhance predictability of current selection tools, to achieve more accuracy on EPDs of younger animals, and to characterize genetics for traits that are difficult or expensive to measure. GE-EPDs add value because they utilize genomic test results in addition to pedigree, performance and progeny data for increased reliability of an animal's EPD profile.

GE-EPDs are Calculated from:

1. The individual's pedigree
2. The individual's performance record
3. The genomic test results of the animal
4. When available, the performance and genomic results of progeny

Percentile Breakdowns

These breakdowns help producers understand where their animals rank for each individual trait given their category.

Don't buy an **imposter.**

Not all "Angus" bulls are **REGISTERED** Angus bulls.

If you see this logo in conjunction with an individual animal or group of animals, you know that that animal is registered with the American Angus Association and backed by the power of **data, programs** and **pedigrees** of the Association.

Invest wisely in those that carry the **Powered By Angus** logo.

Look for the **REGISTRATION NUMBER.**
